Universal-Systems-Intelligence-Engine

Model connected systems, compare scenarios and examine bounded offline forecast studies with traceable evidence.

Product overview

Connected-system simulation, traceable observations and offline forecast research with constrained-decision, release-assurance and Q2 cross-domain comparison software. Developer reports cover energy, mobility and air-quality datasets; exploratory outcomes, selection limits and open independent qualification remain explicit.

Potential acquirers

- Digital-twin vendors
- Systems research groups
- Engineering consultancies

Documented functions

- Compose linked system studies
- Compare declared scenarios
- Review supplied observations
- Run local combined simulations
- Retain attributable histories
- Compare fixed-task offline forecasts with transparent CPU reference predictors
- Review chronological splits, held-out errors, empirical intervals and abstention
- Evaluate declared decision constraints with traceable feasibility and abstention
- Inspect static and executed research-release assurance
- Run pinned CPU data-receipt and benchmark studies
- Import pinned hourly mobility and air-quality CSV receipts with explicit missingness exclusions
- Compare declared domain tasks, chronological baselines and diagnostic paired bootstrap summaries

Available output types

Scenario comparisons / Observation records / Simulation histories / Bounded forecast-study and reference-comparison reports

Operations, reliability & digital twins

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 56,500	**Prototype**

Current scope and conditions

Distribution version 0.7.0 with later research gates and Q2 E1 comparison software. All 255 current local CPU developer tests passed. The retained exploratory study did not meet its numeric superiority target; independent scientific and production qualification remain open.

Scope and transfer review required

Identified edition: 0.7.0 / v1.0 research gates + Q2 E1

• The retained Q2 developer report describes three UCI datasets; raw source CSVs were not supplied for independent recalculation in this website review.

• Reported macro AR(1) gain over persistence: MAE -1.03% (worse), RMSE +3.92% (better). The prospective 10% target on both metrics was NOT MET.

• The reported protocol was not fully preregistered before held-out access. Longest-contiguous-segment selection excludes substantial data and can bias conclusions.

• The comparison, source-authenticity, independent replication, strong domain-baseline, shift/fallback and production-acceptance gates remain open. Financial references price only explicit implementation effort; no scientific-performance premium is included.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-096 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-19. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	56,500	63,579
Negotiation reference - low	44,500	50,076
Negotiation reference - high	70,500	79,334
Recreation cost estimate	187,500	210,994
Marketability cost scenario	150,609	169,480
Monetisation cost scenario	107,578	121,058
Risk-adjusted strategic reference	74,677	84,034
Weighted economic reference	124,649	140,268

Milestone-conditioned reference

EUR 148,002; model change EUR 23,353. Reach the next portfolio maturity stage with source-pinned, reproducible release checks, bounded claims and an agreed operational and handover acceptance scope.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The recreation estimate contains EUR 160,000 of foundations, EUR 7,500 of v0.7 forecasting, EUR 13,500 of later constrained-decision/assurance/Q1 software and EUR 6,500 of Q2 E1 comparison software, giving EUR 187,500. Foundations are counted once. The Q2 increment assumes 64 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500; asking/negotiation inputs preserve the preceding asking/cost relationships, rounded half-up to EUR 500. These are seller assumptions, not logged work, actual expenditure, contractor quotes, minimum costs or established market value. Independent raw-data replication, scientific superiority and production acceptance are excluded; no performance premium is added.

Full budget for the stated priced scope. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
