Closed-Cycle Energy Research & Verification Platform

Compare bounded fluid models and test source, storage and useful-load assumptions under deliberately adverse scenarios before interpreting any physical device claim.

Product overview

Numerical engineering-research software for fluid-network solver comparison, explicit source-storage-load accounting and adverse-scenario screening of declared energy-system candidates.

Potential acquirers

- Engineering and scientific-simulation software vendors
- Energy-conversion and fluid-systems research groups
- Numerical verification and engineering-methodology teams

Documented functions

- Compare bounded network integrators and numerical refinement
- Reconcile explicit energy sources, stores, conversion losses and loads
- Screen declared source-driven candidate scenarios
- Apply adverse source, loss, outage and reserve assumptions
- Reject unaccounted energy and unsupported physical conclusions

Available output types

Fluid-network and cross-solver verification records / Source-storage-load ledgers and candidate assessments / Adverse-scenario and conservation-screening reports

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 22,500	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.2.0a0 / R3A adversarial energy envelopes

• Retained independent-environment records cover earlier identified numerical scopes. Current local unit and analytical audit replay passes; external replay of the latest adverse-envelope increment remains open.

• Adverse envelopes are deliberate assumption scenarios, not formal uncertainty intervals, statistical confidence bounds, measured efficiencies or physical-device performance predictions.

• No perpetual motion, energy without a source, physical engine, calibrated hardware result or freedom-to-operate clearance is demonstrated. Models retain explicit fluid, solver and boundary limitations.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-116 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-01. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	22,500	25,137
Negotiation reference - low	18,000	20,110
Negotiation reference - high	27,500	30,723
Recreation cost estimate	74,500	83,231
Marketability cost scenario	28,813	32,190
Monetisation cost scenario	18,998	21,225
Risk-adjusted strategic reference	5,887	6,577
Weighted economic reference	30,248	33,793

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced passive-network and convergence foundations are retained once. The increment covers cross-solver, source-storage-load, candidate and adverse-envelope software. Physical engines, measured energy production, perpetual-motion claims, hardware, legal clearance and future phases are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
