Fundamental Reality Research Platform

Check declared dataset provenance, uncertainty and split conditions; inspect a defined astronomical table format while retaining explicit source-authentication and scientific limits.

Product overview

Research software combining numerical physics-reference experiments with local dataset-governance checks, versioned evidence records and a bounded astronomical table parser.

Potential acquirers

- Scientific-software vendors
- Computational physics and cosmology research groups
- Research-methods and numerical-assurance teams

Documented functions

- Run cosmological-reference and synthetic geometry experiments
- Validate dataset manifests, declared rights and local asset integrity
- Check uncertainty, covariance and partition declarations
- Inspect bounded astronomical table records and reject malformed inputs
- Preserve versioned research records and source limitations

Available output types

Numerical reference and synthetic experiment records / Dataset-governance and local-integrity assessments / Astronomical table-format and provenance reports

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 16,500	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.3.1 / R2A observational-source parser and governance

• Retained source-matched second-runtime records cover the implemented numerical, record-contract, dataset-governance and table-parser software. Current local regression replay also passes; full observational-data admission remains open.

• The astronomical test fixture is a web transcription, not the authenticated original source file. Original-file provenance, product-specific rights, full scientific covariance, instrument and selection qualification remain unresolved.

• Reference models and software checks do not establish emergent spacetime, cosmic origins, a new physical theory or an accepted cosmological likelihood. Recipient and intended-use acceptance require separate evidence.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-112 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-01. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	16,500	18,434
Negotiation reference - low	13,000	14,524
Negotiation reference - high	20,000	22,344
Recreation cost estimate	53,500	59,770
Marketability cost scenario	20,691	23,116
Monetisation cost scenario	13,643	15,242
Risk-adjusted strategic reference	4,228	4,724
Weighted economic reference	21,722	24,268

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced numerical-reference, synthetic geometry and record-assurance foundations are retained once. The increment covers only implemented dataset-governance and table-format software. Other portfolio projects, original observational data rights, authenticated scientific ingestion, novel physics, future modules and production operations are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
