Temporal Causality Breakthrough Research Platform

Preserve declared research commitments, verify local evidence files and publish complete custody records under explicit filesystem and independent-witness limitations.

Product overview

Preregistered binary-study and research-custody software with local artifact-byte verification, bounded-memory hashing and exclusive complete-file publication.

Potential acquirers

- Research-methods and scientific-software developers
- Foundational-physics research organisations
- Evidence-integrity and experimental-protocol teams

Documented functions

- Prepare fixed binary-study commitments and statistical audits
- Maintain study- and run-bound custody records
- Verify local artifact bytes, order and digests
- Stream bounded-memory artifact hashing
- Publish complete evidence files without replacing existing targets

Available output types

Preregistered study and conditional statistical reports / Custody-chain and local-artifact verification records / Research-screening and evidence-publication assessments

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 14,000	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.1.0 / custody v3 and CR-OPEN-16 research review

• Current local regression replay supports the implemented study, custody and evidence-file software. Matching local bytes and hashes do not authenticate original acquisition, independent timestamps or an externally witnessed chronology.

• Complete-file publication is qualified on the tested local filesystem. Universal crash durability, hostile-parent-directory protection, all-platform access controls and independent security certification are not established.

• The updated mechanism review remains theory-only, including the chronology and access conditions of the examined geometric models. No validated physical source, buildable time channel, future-to-past message or independently reproduced physical anomaly is demonstrated.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-113 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-01. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	14,000	15,641
Negotiation reference - low	11,000	12,289
Negotiation reference - high	17,000	18,992
Recreation cost estimate	45,500	50,833
Marketability cost scenario	17,597	19,659
Monetisation cost scenario	11,603	12,963
Risk-adjusted strategic reference	3,596	4,017
Weighted economic reference	18,474	20,639

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced binary-study, custody-v3 and research-screening foundations are retained once. The increment covers file verification, streaming and atomic publication assurance only. Speculative physical mechanisms, a time-travel result, independent witness services, hardware and future experiments receive no monetary premium.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
