Modular Aerospace Research Platform

Turn aerospace observations into replayable research cases, compare declared evidence and keep uncertainty visible.

Product overview

A research workbench for organising aerial observations and retaining uncertain events for review.

Documented functions

- Review aerial-event observations
- Compare observations from multiple locations
- Retain events requiring investigation
- Document uncertainty
- Cross-reference permitted external records

Potential buyer fit

Aerospace research groups / Observation-network developers / Scientific data teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Event dossiers / Observation archives / Review records

Profile and full editable brief

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 45,000	**EUR 400,000**

Current repository documentation

Current main baseline: 0.1.0.

Separate development: 0.6.3 - unmerged STELLA research foundation.

Main retains the 0.1.0 baseline. The separate 0.6.3 STELLA candidate adds offline sensor processing, calibrated geometry, replayable evidence comparison and retained actual NOAA context. Its build report records 1,043 tests and independent validation of 96 schemas; these are source-bound repository results, not executions by this website review. Field accuracy, cross-modality fusion and mission qualification remain open.

Material limitations: Representative hardware, calibrated field accuracy and general cross-modality fusion are not qualified. NOAA archive context does not by itself validate a reconstructed physical event.

Next qualification step: Complete the remaining S-014 comparison/fusion work and qualify representative calibrated field observations; keep the development candidate separate from main.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Commercial and delivery boundary

The asking reference and seller-estimated cost to recreate comparable work retain the existing individual assessment. They are not historical expenditure, a contractor quotation, an independent appraisal, demonstrated revenue or a guaranteed buyer saving.

AS IS acquisition is subject to a separate written agreement defining the first-party rights, exact version, delivery manifest and acceptance. Third-party software, data, models, media and service rights retain their own terms. Future development, hosting, operational support, customer content and private credentials are separately scoped or excluded.

Source basis

TA-IP-001-P: product documentation reviewed 16 October 2026. TA-IP-001-C: retained commercial register. TA-IP-001-A: dated seller handover assessment. This catalogue review did not rerun product tests or certify legal, scientific, security or production acceptance.
