Plant Environment Decision Intelligence Platform

Assess plants against site conditions, manage versioned planting plans and compare the evidence behind retained assessment results.

Product overview

A plant-environment decision workbench for site suitability, versioned planting plans and evidence-backed comparison of retained assessments.

Documented functions

- Assess several candidate species against one site
- Manage owner-scoped projects, sites and planting zones
- Retain versioned planting-plan scenarios
- Export assessment inputs, results and integrity records
- Compare retained scenarios and explain material differences

Potential buyer fit

Garden-planning software vendors / Horticultural service firms / Landscape planning teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Viability reports / Planning recommendations / Data-quality records

Profile and full editable brief

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 270,000	**EUR 900,000**

Current repository documentation

Current main baseline: Retained assessment-comparison build.

The current source provides bounded multi-species site assessment, owner-scoped projects, sites and zones, versioned plan scenarios, retained assessment exports and read-only scenario comparison. The comparison report records 112 Go tests, seven Python regressions and 376 file-runtime checks. Earlier native PostgreSQL evidence applies to earlier retained-evidence source; the new comparison backend still needs its own native qualification. Regional data, live weather and deployment acceptance remain separate.

Material limitations: Botanical and spatial data coverage, real weather behavior and horticultural field accuracy need region-specific acceptance. The new comparison route is not covered by the earlier native database campaign.

Next qualification step: Run the exact comparison build against native PostgreSQL, then qualify regional botanical/spatial data, authorized weather behavior and the intended deployment.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Commercial and delivery boundary

The asking reference and seller-estimated cost to recreate comparable work retain the existing individual assessment. They are not historical expenditure, a contractor quotation, an independent appraisal, demonstrated revenue or a guaranteed buyer saving.

AS IS acquisition is subject to a separate written agreement defining the first-party rights, exact version, delivery manifest and acceptance. Third-party software, data, models, media and service rights retain their own terms. Future development, hosting, operational support, customer content and private credentials are separately scoped or excluded.

Source basis

TA-IP-008-P: product documentation reviewed 16 October 2026. TA-IP-008-C: retained commercial register. TA-IP-008-A: dated seller handover assessment. This catalogue review did not rerun product tests or certify legal, scientific, security or production acceptance.
