Air-to-Water Transition Vehicle

Explore a conceptual air-to-water vehicle in simulation and review how its control choices affect the model.

Product overview

A software-only vehicle research environment for studying an air-to-water transition concept.

Documented functions

- Run transition simulations
- Compare control studies
- Inject modelled faults
- Replay experiment histories
- Retain validation records

Potential buyer fit

Vehicle simulation developers / Aerospace research groups / Control research teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Simulation histories / Control comparisons / Study reports

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/air-to-water-transition-vehicle/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 40,000	**EUR 400,000**

Current repository documentation

Current main baseline: v8 Master.

An implemented prototype for evaluation and further development.

Material limitations: No physical vehicle is included. Model results do not establish aerodynamic, hydrodynamic or structural feasibility.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Financial-reference review: 16 October 2026. Legacy cost reference; complete work budget missing. Original financial-reference date: 2026-10-12. Seller ask and recreation anchor are retained. Current documentation does not automatically expand the priced delivery; a delivery-specific re-estimate remains required.

Commercial and delivery boundary

Amounts are retained seller assumptions, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-017-P: current documentation. TA-IP-017-C: financial-reference review, 16 October 2026. TA-IP-017-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
