CipherRouteDB

Explore privacy-conscious ways to route and access information in controlled research settings.

Product overview

A confidential-access research asset for studying privacy-oriented information routing.

Documented functions

- Study confidential record access
- Compare routing scenarios
- Review repeated-query behaviour
- Retain restart and continuity studies
- Record research limitations

Potential buyer fit

Privacy research groups / Secure-storage developers / Academic security teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Research comparisons / Access-study records / Continuity evidence

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/cipherroutedb/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 115,000	**EUR 850,000**

Current repository documentation

Current main baseline: 0.3.16.

An implemented prototype for evaluation and further development.

Material limitations: The unresolved confidential-access boundary is not presented as solved. The current research primitives are not production security assurance.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Financial-reference review: 16 October 2026. Legacy cost reference; complete work budget missing. Original financial-reference date: 2026-10-12. Seller ask and recreation anchor are retained. Current documentation does not automatically expand the priced delivery; a delivery-specific re-estimate remains required.

Commercial and delivery boundary

Amounts are retained seller assumptions, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-041-P: current documentation. TA-IP-041-C: financial-reference review, 16 October 2026. TA-IP-041-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
