Distributed AI Resource Fabric

Coordinate AI work across your available computers, oversee active workloads and review capacity and recovery decisions.

Product overview

An AI-resource coordination asset for reviewing capacity, workload placement and recoverability.

Documented functions

- Discover usable computing capacity
- Review workload placement
- Reserve compatible resources
- Observe execution and recovery
- Retain measured qualification evidence

Potential buyer fit

AI infrastructure vendors / Compute operators / Enterprise AI platform teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Capacity records / Workload decisions / Execution and recovery evidence

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/distributed-ai-resource-fabric/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 500,000	**EUR 1,400,000**

Current repository documentation

Current main baseline: 0.19.0.

Separate development: 0.24.0 unmerged draft; physical campaign preflight unsuccessful.

Evaluate the v0.19 main software and the retained v0.24 draft separately. The newer hardware-campaign record documents a failed inventory preflight, not multi-GPU execution. The retained 375-test and single-T4 results remain version-specific. Physical multi-GPU, two-host recovery and live containment gates remain open; prices are retained.

Material limitations: Single-device evidence does not establish every multi-host scenario. Hardware, external model rights and production operation are separately scoped.

Next qualification step: Real model execution across two physical GPUs, then two independent hosts, plus live operating-system containment on an authorised host.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Financial-reference review: 16 October 2026. Partial work-package assumptions; complete cost anchor not reconstructed. Original financial-reference date: 2026-10-10. Seller ask and recreation anchor are retained. Current documentation does not automatically expand the priced delivery; a delivery-specific re-estimate remains required.

Commercial and delivery boundary

Amounts are retained seller assumptions, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-022-P: current documentation. TA-IP-022-C: financial-reference review, 16 October 2026. TA-IP-022-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
