# Manuscript Integrity & Publishing Platform

Write and assemble your chapters, track editorial evidence and defects, and prepare an author-approved manuscript for manual publication handoff.

## Product overview

A manuscript-production prototype for editorial evidence and author-controlled release.

## Documented functions

- Write and assemble chapters
- Inspect ordinary manuscript inputs
- Track quality evidence and defects
- Record explicit author release decisions
- Prepare manual publication handovers

## Potential buyer fit

Author-software vendors / Editorial teams / Small publishing houses

Buyer profiles are positioning suggestions; they are not established customers or contracts.

## Documented output types

Assembled manuscripts / Editorial evidence records / Offline handover packages

## Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/manuscript-integrity-publishing-platform/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

# Status and commercial reference

| SELLER ASKING REFERENCE | RECREATION ESTIMATE |
| --- | --- |
| **EUR 21,000** | **EUR 70,000** |

## Current repository documentation

Current main baseline: 0.1.0.

Separate development: 0.7.0 - documented offline staging; full application source import pending.

The repository still delivers the 0.1.0 editorial QA application. Later documents through 0.7 record creative-module curation, genre/style controls, originality work and complete author-archive placement as separate offline staging. Full later application sources are not imported and remain outside the existing 0.1 asking/recreation scope. The retained 0.1 tests and later reported checks retain their own source and execution dates.

Material limitations: Later staged application source is not yet part of the delivered repository package or its retained price. Editorial, rights, rendering and distributor acceptance need actual evidence.

Next qualification step: Import and integrity-check the complete staged application, then independently rerun its behavior, manuscript rendering and editorial qualification before extending the delivered software scope.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

## Individual financial-reference review

Financial-reference review: 16 October 2026. Disclosed base/increment budgets reconcile; effort remains an unverified seller assumption. Original financial-reference date: 2026-10-13. Seller ask and recreation anchor are retained. Current documentation does not automatically expand the priced delivery; a delivery-specific re-estimate remains required.

## Commercial and delivery boundary

Amounts are retained seller assumptions, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

## Source basis

TA-IP-106-P: current documentation. TA-IP-106-C: financial-reference review, 16 October 2026. TA-IP-106-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
