Temporal Physics & Causality Research Platform

Explore causal-order questions through controlled computational-physics experiments.

Product overview

A computational physics research asset for falsifiable causal-order studies.

Documented functions

- Define bounded research studies
- Review experimental assumptions
- Analyse declared observation counts
- Compare hypothesis evidence
- Retain reproducible study records

Potential buyer fit

Physics research groups / Metrology teams / Scientific software developers

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Research protocols / Analysis reports / Hypothesis review dossiers

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/temporal-physics-causality-research-platform/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 50,000	**EUR 1,050,000**

Current repository documentation

Current main baseline: 0.16.0.

Experimental research software; scientific conclusions require separate evidence.

Material limitations: The physical invention target remains unverified. Computational results do not establish a working device or extraordinary physical capability.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Financial-reference review: 16 October 2026. Legacy cost reference; complete work budget missing. Original financial-reference date: 2026-10-12. Seller ask and recreation anchor are retained. Current documentation does not automatically expand the priced delivery; a delivery-specific re-estimate remains required.

Commercial and delivery boundary

Amounts are retained seller assumptions, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-058-P: current documentation. TA-IP-058-C: financial-reference review, 16 October 2026. TA-IP-058-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
