Advanced Ground Vehicle Engineering

Compare bounded ground-vehicle engineering studies and trace requirements, configuration changes and evidence-review decisions through reproducible reports.

Product overview

An offline ground-vehicle engineering-analysis prototype with physical-model studies, traceable requirements, versioned audit packages and controlled evidence-policy review.

Potential acquirers

- Vehicle engineering and simulation businesses
- Engineering assurance and validation teams
- Mobility research organisations

Documented functions

- Run supported mobility, energy and thermal studies
- Review model-versus-reference datasets and uncertainty
- Trace requirements to identified evidence
- Compare configuration baselines and evidence lifecycle changes
- Prepare audit packages and policy-governed review queues

Available output types

Engineering-analysis reports / Reference-data comparisons / Traceability and change-impact records / Evidence lifecycle and policy-review packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 60,500 · indicative USD 67,845

Identified edition: 0.13.0

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for 0.13.0. The previously priced engineering, uncertainty, dataset, scenario and thermal-network foundations are reused once. Added traceability, baseline, audit-package, lifecycle and policy software is included. Vehicle hardware, operational control, physical qualification, certification and independently accepted field data are excluded.

• A non-operational engineering-analysis prototype; software calculations and fixture checks do not establish real-vehicle, field or physical-system qualification.

• Policy, approval and waiver records organise review; they do not confer regulatory approval, legal authority or independently certified engineering evidence.

• Hardware control, real sensor operation, safety-critical deployment and intended-use acceptance remain outside the offered software qualification.

Conditions before handover

• Freeze the source-specific delivery edition, transferable rights and exclusions.

• Review component obligations, source-specific reproducibility and security evidence under agreed confidentiality.

• Complete intended-use and recipient-environment acceptance before relying on the identified outputs.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	60,500	67,845
Negotiation reference - low	49,500	55,509
Negotiation reference - high	77,000	86,348
Recreation cost estimate	495,000	555,093
Marketability cost scenario	340,808	382,182
Monetisation cost scenario	284,006	318,484
Risk-adjusted strategic reference	168,984	189,499
Weighted economic reference	307,857	345,231

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions, not actual expenditure, independent quotations or market value. The previously priced engineering, uncertainty, dataset, scenario and thermal-network foundations are reused once. Added traceability, baseline, audit-package, lifecycle and policy software is included. Vehicle hardware, operational control, physical qualification, certification and independently accepted field data are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 363,405; model change EUR 55,548.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source documents CMake/CTest gate, track-contact/ground-pressure reference models, lifecycle evidence policy and held-out data roles.

Remaining limits

Bundled scenarios are synthetic and cannot qualify actual vehicles, subsystems, TRL or operational safety.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — An offline ground-vehicle engineering-analysis prototype with physical-model studies, traceable requirements, versioned audit packages and controlled evidence-policy review. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-034 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
