Autonomous Adaptation Framework

Evaluate recovery options when a system degrades, and examine whether continuity can be preserved.

Product overview

An adaptation and continuity research framework with source-bound evidence qualification, a separate dual-attestation authorization protocol and canonical typed evidence contracts.

Potential acquirers

- Reliability software vendors
- Systems research teams
- Platform engineering groups

Documented functions

- Study bounded degradation and continuity recovery
- Bind target-specific evidence and qualification lineage
- Require distinct Guardian and Operator attestations
- Use explicit signature-verifier and replay-guard contracts
- Encode canonical evidence and retain immutable legacy bindings

Available output types

Recovery plans / Continuity studies / Qualification records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 362,000 · indicative USD 405,947

Identified edition: 0.25.0

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 0.25.0. The v0.24 executed baseline and the separately qualified v0.25 implementation must be distinguished in the delivery agreement. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• The v0.24 qualification is source- and target-specific. General power-loss durability, independent third-party reproduction, production key infrastructure and operational authorization are not established.

Conditions before handover

• Execute the exact v0.25 native Rust gate, qualify each V2 producer migration and supply concrete reviewed identity, signature-verifier and durable atomic nonce implementations for any deployment.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	362,000	405,947
Negotiation reference - low	292,000	327,449
Negotiation reference - high	452,500	507,434
Recreation cost estimate	1,660,000	1,861,524
Marketability cost scenario	2,004,450	2,247,790
Monetisation cost scenario	1,904,850	2,136,099
Risk-adjusted strategic reference	2,022,362	2,267,877
Weighted economic reference	1,904,687	2,135,916

Cost basis

Recreation estimate: EUR 1,650,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 1,660,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Retained v0.24 evidence specifies 171 Rust tests, 140 governed bindings and non-simulated isolated filesystem target qualification; older README 0.19 line is not current qualification record.

Remaining limits

Qualification is pinned to one target fingerprint and source; no general external provider, power-loss durability, production authority or independent field qualification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — An adaptation and continuity research framework with source-bound evidence qualification, a separate dual-attestation authorization protocol and canonical typed evidence contracts. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-027 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
