Causal State Field Engine

Deterministic state-transition integrity and compact audit software with selective disclosure, signed audit commitments and a scoped successor-key lifecycle candidate.

Product overview

Deterministic state-transition integrity and compact audit software with selective disclosure, signed audit commitments and a scoped successor-key lifecycle candidate.

Potential acquirers

- Audit software vendors
- Enterprise systems teams
- Assurance product developers

Documented functions

- Record and replay attributable state transitions
- Produce compact inclusion and continuity evidence
- Disclose selected historical state under explicit rules
- Verify signed audit commitments
- Evaluate scoped successor authorization and proof of key possession

Available output types

Change journals / Audit records / Selective disclosure packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 115,000 · indicative USD 128,961

Identified edition: 0.8.0 retained scope / 0.9.0 key-lifecycle candidate

Developed software · Conditional handover

Current scope and conditions

The earlier specifically priced first-party state-integrity scope remains the cost anchor. The 0.9.0 scoped key-lifecycle implementation is disclosed as a candidate with unresolved integration checks and no added monetary premium. External authority, deployed security and independently accepted handover are excluded.

• Current full local replay reports failed tests. The new lifecycle tests supply incomplete anchor fixtures to the actual lower-layer verifier; the current release is not fully qualified.

• Prior protocol evidence retains its original version scope. The new lifecycle candidate, current dependency inventory and seller threat model require integrated recipient review.

• Integrity relative to supplied keys and inputs does not establish trusted time, legal identity, universal revocation, independently certified security or production acceptance.

Conditions before handover

• Resolve and repeat the stated current-candidate regression and complete release gates before representing that candidate as accepted.

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	115,000	128,961
Negotiation reference - low	90,000	100,926
Negotiation reference - high	145,000	162,603
Recreation cost estimate	625,000	700,875
Marketability cost scenario	590,625	662,327
Monetisation cost scenario	646,875	725,406
Risk-adjusted strategic reference	352,398	395,179
Weighted economic reference	527,089	591,078

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance. Review on 2026-11-03: The earlier specifically priced first-party state-integrity scope remains the cost anchor. The 0.9.0 scoped key-lifecycle implementation is disclosed as a candidate with unresolved integration checks and no added monetary premium. External authority, deployed security and independently accepted handover are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Retained internal v0.9 report documents 25/25 scoped harness tests for v2 lifecycle/CLI; full historical private checkout tests not reexecuted in that environment.

Remaining limits

No independent trusted time, global revocation, physical HSM custody, legal PKI identity or independent penetration-testing assurance.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Deterministic state-transition integrity and compact audit software with selective disclosure, signed audit commitments and a scoped successor-key lifecycle candidate. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Current full local replay reports failed tests. The new lifecycle tests supply incomplete anchor fixtures to the actual lower-layer verifier; the current release is not fully qualified. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-061 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
