CipherRouteDB

Explore privacy-conscious ways to route and access information in controlled research settings.

Product overview

A privacy-oriented database research foundation with restart and authenticated journal studies, AEAD persistence, external rollback-guard contracts and controlled security-bootstrap interfaces.

Potential acquirers

- Privacy research groups
- Secure-storage developers
- Academic security teams

Documented functions

- Study confidential access and routing primitives
- Retain authenticated journal and restart research
- Evaluate AEAD persistence and key rotation
- Bind external rollback and qualification contracts
- Exercise an HTTPS/mTLS monotonic-counter adapter

Available output types

Research comparisons / Access-study records / Continuity evidence

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 116,000 · indicative USD 130,082

Identified edition: 0.3.19

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 0.3.19. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• The private-fetch access-pattern primitive remains unresolved. ORAM/PIR/DPF and shadow components are research/reference scope; this is not a qualified production private database.

Conditions before handover

• Run the full linked checkout gate and qualify real root-key custody, independent rollback storage, external statements and recovery under the intended deployment threat model.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	116,000	130,082
Negotiation reference - low	91,000	102,047
Negotiation reference - high	146,500	164,285
Recreation cost estimate	858,500	962,722
Marketability cost scenario	881,143	988,114
Monetisation cost scenario	738,847	828,543
Risk-adjusted strategic reference	738,795	828,485
Weighted economic reference	797,201	893,981

Cost basis

Recreation estimate: EUR 850,000 retained scope component plus EUR 8,500 for the explicitly scoped implementation work budget, giving EUR 858,500. The scoped budget assumes 80 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 985,044; model change EUR 187,843.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source documents testable reference vectors, fail-closed key rotation, pinned backend identities and mTLS monotonic-counter interface; complete native repo CTest not certified at this HEAD.

Remaining limits

No production secure database, fully qualified external HSM/counter or audited 128-bit system guarantee; rollback and availability need real external verification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A privacy-oriented database research foundation with restart and authenticated journal studies, AEAD persistence, external rollback-guard contracts and controlled security-bootstrap interfaces. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-041 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
