Cosmological Structure and Expansion Research Platform

Validate declared catalogue structure, map sky coordinates under explicit geometry assumptions and compare synthetic weighted clustering estimates with independent numerical references.

Product overview

Computational cosmology software for bounded catalogue integrity, full-row FITS checks, fiducial sky geometry and weighted isotropic or anisotropic correlation references.

Potential acquirers

- Scientific-software and astronomical-analysis vendors
- Cosmology and survey-methodology research groups
- Research teams developing numerical-assurance workflows

Documented functions

- Validate complete declared FITS catalogue rows within resource limits
- Transform sky coordinates under a stated fiducial cosmology
- Apply matched sky-coordinate selection to data and random inputs
- Compute exact weighted isotropic and bounded anisotropic correlations
- Compare multipole and covariance outputs with numerical oracles

Available output types

Catalogue-integrity and full-row format reports / Fiducial geometry and weighted-correlation records / Anisotropic-bin, multipole and numerical-reference assessments

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 27,000 · indicative USD 30,278

Identified edition: Python 0.1.0 / native 0.10.0 / S10 anisotropic reference

Research software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation. Previously priced correlation, covariance and sampled-FITS foundations are retained once. Only the added full-row scanner, fiducial geometry, selected sky pipeline and anisotropic reference software are included. Survey-data rights, accepted observations, physical discoveries, full-survey deployment and future research are excluded.

• The complete current native build, regression suite and anisotropic numerical oracle pass local CPU replay. Retained cross-environment evidence has its own earlier source scope; independent current-edition recipient acceptance remains separate.

• Tests use bounded synthetic fixtures. Real survey-data admission, survey selection and covariance, source-specific rights and published observational reconstruction remain open.

• Anisotropic estimates use the stated pre-reconstruction convention and bounded exact reference implementation. They do not establish full-survey scalability, a cosmological discovery or reproduction of a published survey statistic.

Conditions before handover

• Freeze the specific first-party source, delivery documents, transferable rights and exclusions.

• Review retained source-specific qualification and further independent or intended-use acceptance.

• Keep third-party rights, future capabilities and unverified empirical claims outside the agreed proprietary scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	27,000	30,278
Negotiation reference - low	22,000	24,671
Negotiation reference - high	34,000	38,128
Recreation cost estimate	90,500	101,487
Marketability cost scenario	35,001	39,250
Monetisation cost scenario	23,078	25,880
Risk-adjusted strategic reference	7,152	8,020
Weighted economic reference	36,744	41,205

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced correlation, covariance and sampled-FITS foundations are retained once. Only the added full-row scanner, fiducial geometry, selected sky pipeline and anisotropic reference software are included. Survey-data rights, accepted observations, physical discoveries, full-survey deployment and future research are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

S10 local component document: GCC native build, 1/1 CTest, 80/80 independent synthetic oracle comparisons; earlier S9 source reports integrated CPU acceptance.

Remaining limits

S10 full checkout/integration NOT_RUN; no accepted full real DESI source/likelihood analysis or empirical cosmological discovery.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: R — Computational cosmology software for bounded catalogue integrity, full-row FITS checks, fiducial sky geometry and weighted isotropic or anisotropic correlation references. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Source-specific diligence and recipient acceptance remain separate.

Rights and component obligations: R1 — Repository licence file identified. Source-specific diligence and recipient acceptance remain separate.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Source-specific diligence and recipient acceptance remain separate.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. Source-specific diligence and recipient acceptance remain separate.

Buyer information and next step

Quote TA-IP-114 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
