Distributed Compute Fabric

Coordinate remote computing work and review continuity across your distributed operations.

Product overview

A distributed-compute product foundation for buyer-operated services.

Potential acquirers

- Compute service developers
- Enterprise infrastructure vendors
- Private cloud teams

Documented functions

- Coordinate consent-based remote workers
- Review workload delivery
- Retain session continuity
- Track worker responses
- Prepare transferable service foundations

Available output types

Worker session records / Delivery evidence / Service foundation material

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 229,000 · indicative USD 256,801

Identified edition: 0.11.0

Prototype · Conditional handover

Current scope and conditions

Existing first-party 0.11.0 source (default-branch snapshot), including the described implemented increment. Production remote-provider operation, public networking, fleet installation, hostile-code containment, accelerator execution and multi-controller operation remain excluded.

• Distributed-compute reference software. Production fleet operation, provider accounts and cloud-service commitments are excluded.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• Release identity and provenance evidence remain incomplete.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	229,000	256,801
Negotiation reference - low	182,000	204,095
Negotiation reference - high	286,500	321,281
Recreation cost estimate	1,250,000	1,401,750
Marketability cost scenario	1,753,125	1,965,954
Monetisation cost scenario	2,156,250	2,418,019
Risk-adjusted strategic reference	2,346,996	2,631,921
Weighted economic reference	1,915,824	2,148,405

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 2,462,914; model change EUR 547,090.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Retained v0.11 report describes 212/212 isolated reconstructed-source tests on Linux Python 3.13.5, not a fresh Git checkout. Outbound worker command admission and fencing are bounded.

Remaining limits

No non-loopback hosting, internet-grade certificate rotation, GPU remote workload pooling, hostile-code sandbox or production network/cloud qualification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A distributed-compute product foundation for buyer-operated services. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-082 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
