AEGIS Vision — Evidence-Governed Visual Intelligence Platform

Examine visual material, compare interpretations and follow the evidence supporting your review.

Product overview

A visual-evidence analysis asset that makes interpretations and disagreements reviewable.

Potential acquirers

- Visual-analysis software vendors
- Research groups
- Evidence-review teams

Documented functions

- Review visual observations
- Separate observations from interpretations
- Compare analysis results
- Expose disagreements
- Retain qualification and audit records

Available output types

Structured visual claims / Comparison reports / Reviewable evidence packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 354,500 · indicative USD 397,536

Identified edition: 2.9.0

Developed software · Conditional handover

Current scope and conditions

Existing first-party 2.9.0 source (default-branch snapshot), including the described implemented increment. No visual-accuracy, always-on monitoring, hidden remote-model identity, production, legal or independent-certification premium is included.

• Visual-evidence reference software. Conclusions and deployment suitability must be reviewed for the intended domain.

• AEGIS Vision 2.9.0 implements evidence-governed image analysis, model provenance, dataset and benchmark governance, deterministic release readiness and observation-driven requalification. Its 16 October 2026 internal verification report records 130 passing tests and 90.88% measured core coverage against an 85% floor; this is internal evidence, not an independent v2.9 release re-run. External CUDA PASS remains bound to v2.3.3. It does not validate provider-managed weights, representative visual accuracy, always-on monitoring or production approval. EUR 354,500 is a dated seller ask; EUR 1,165,000 reproduction estimate includes an EUR 15,000 scoped increment on a legacy EUR 1,150,000 base.

• Evidence-package hashes are not independently trusted signatures or model-weight attestation; drift requalification uses supplied observations and is not an always-on operational monitoring service.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• An explicit delivery manifest and handover scope remain to be agreed.

• Do not transfer historical v2.3.3 external GPU PASS status to v2.9.0, and independently verify the exact delivery release if required.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	354,500	397,536
Negotiation reference - low	283,500	317,917
Negotiation reference - high	445,500	499,584
Recreation cost estimate	1,165,000	1,306,431
Marketability cost scenario	1,922,250	2,155,611
Monetisation cost scenario	2,563,000	2,874,148
Risk-adjusted strategic reference	3,096,673	3,472,609
Weighted economic reference	2,272,136	2,547,973

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README documents provider evidence, quorum/independence-domain handling, release packaging and ≥85% core coverage gate; no independent fresh test run or licensed model deployment confirmed.

Remaining limits

Provider diversity is not real independence by itself; self-attested runtime HMAC is not TPM/TEE attestation; scientific truth/production security unverified.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — A visual-evidence analysis asset that makes interpretations and disagreements reviewable. The offered edition and material boundaries govern review.

Evidence and validation: E4 — E3 plus repository-retained independent/external validation evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-012 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
