Foundational Existence Research Framework

A foundational research archive with nine analytical volumes, finite semantic/countermodel engines and a bounded bridge from declared observational provenance to software-evidence review.

Product overview

A foundational research archive with nine analytical volumes, finite semantic/countermodel engines and a bounded bridge from declared observational provenance to software-evidence review.

Potential acquirers

- Logic and philosophical research groups
- Formal-methods and research-software teams
- Scientific methodology and education publishers

Documented functions

- Compare finite identity and counterpart semantics
- Analyze premise dependencies, inconsistency and countermodels
- Separate logical, temporal, causal and grounding relations
- Screen declared observational provenance and quarantine acquired records
- Verify complete test/report/source bindings in evidence archives

Available output types

Foundational research volumes and protocols / Finite-model counterexamples and enumeration reports / Local regression and semantic-boundary records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 18,000 · indicative USD 20,185

Identified edition: R8C / finite semantics and evidence-integrity contracts

Research software · Conditional handover

Current scope and conditions

Previously budgeted R2/R3 finite models and four volumes are retained once. Added R4-R8C counterpart, premise, typed-comparison, provenance/quarantine and evidence-contract software plus five further volumes is priced only as first-party research work. Facts, general ideas, third-party works, empirical discoveries and future qualification are excluded.

• Current local replay passes its executed R2-R8C tests. Earlier R8B acceptance retains its documented omitted-manifest-entry warning; the new contract is tested separately rather than rewriting that evidence.

• NASA acquisition tests use controlled transport and the observational bridge uses declared inputs. No live NASA dataset was retrieved or scientifically admitted in this review.

• The nine volumes and bounded models do not prove facts about ultimate physical existence. Scientific novelty, external peer review, real observational independence and unrestricted causal claims remain unestablished.

Conditions before handover

• Freeze the specifically agreed first-party edition, documents, rights and exclusions.

• Reproduce representative recipient cases and review component, delivery and acceptance records.

• Keep unsupported scientific conclusions and third-party works outside the transfer scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	18,000	20,185
Negotiation reference - low	15,500	17,382
Negotiation reference - high	24,000	26,914
Recreation cost estimate	61,500	68,966
Marketability cost scenario	23,785	26,672
Monetisation cost scenario	15,683	17,587
Risk-adjusted strategic reference	4,860	5,450
Weighted economic reference	24,970	28,001

Cost basis

The retained priced scope and explicitly non-overlapping implementation budgets reconcile below. Effort and prices remain seller assumptions, not actual expenditure, independent quotations or established market value. Previously budgeted R2/R3 finite models and four volumes are retained once. Added R4-R8C counterpart, premise, typed-comparison, provenance/quarantine and evidence-contract software plus five further volumes is priced only as first-party research work. Facts, general ideas, third-party works, empirical discoveries and future qualification are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source evidence records 302/302 R2-R8B software tests with an explicit manifest warning. New R8C module rejects incomplete report manifests; 38 additional local regression tests documented.

Remaining limits

Combined R2-R8C 340-test frozen CPU acceptance NOT_RUN; no actual NASA dataset admission, external scientific validation or physical discovery.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: R — A foundational research archive with nine analytical volumes, finite semantic/countermodel engines and a bounded bridge from declared observational provenance to software-evidence review. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Current local replay passes its executed R2-R8C tests. Earlier R8B acceptance retains its documented omitted-manifest-entry warning; the new contract is tested separately rather than rewriting that evidence. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R1 — Repository licence file identified. Source-specific review and recipient acceptance remain separate.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Source-specific review and recipient acceptance remain separate.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. Source-specific review and recipient acceptance remain separate.

Buyer information and next step

Quote TA-IP-119 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
