Generative Media Production Platform

Control a first-party media production workflow with isolated inference workers, account ownership and internal usage credits.

Product overview

A local media-production control plane with tenant-scoped accounts, hashed API keys, queued generation jobs and separately operated inference workers. Internal credits reserve and settle usage; administrative controls support suspension, recovery and review.

Potential acquirers

- Media software vendors
- Creator-platform teams
- Production tool developers

Documented functions

- Scope accounts, API keys and jobs to their tenant owner
- Reserve credits and concurrency atomically when accepting jobs
- Settle completed usage and refund failed or cancelled work
- Operate isolated inference workers through a defined protocol
- Review generated media contracts and administrative recovery

Available output types

Generation job and usage records / Validated media artifacts / Administrative and credit-ledger records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 162,000 · indicative USD 181,667

Identified edition: 0.5.1

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party 0.5.1 control-plane, commercial-control and worker-protocol implementation with documentation. Third-party models, weights, runtimes, services and GPU infrastructure retain separate terms.

• Model weights and inference runtime are separately installed third-party components under their own terms.

• Internal credits are entitlement units, not currency or a payment service.

• Offline control-plane checks do not establish GPU performance, production security or customer deployment.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	162,000	181,667
Negotiation reference - low	126,500	141,857
Negotiation reference - high	202,000	226,523
Recreation cost estimate	910,000	1,020,474
Marketability cost scenario	1,160,250	1,301,104
Monetisation cost scenario	1,433,250	1,607,247
Risk-adjusted strategic reference	1,553,285	1,741,854
Weighted economic reference	1,289,850	1,446,438

Cost basis

The recreation estimate contains EUR 900,000 of previously scoped work plus EUR 10,000 for 0.5.1 commercial control implementation, giving EUR 910,000. This increment assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. Asking/negotiation inputs preserve prior asking/cost relationships, rounded half-up to EUR 500. All effort and prices remain seller assumptions; market value and actual expenditure are not established. Existing v0.4 media orchestration and isolated-worker foundations are reused and excluded from this increment. Naming changes carry no premium. Model weights, external inference rights, real payments, GPU performance and production acceptance are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 1,652,337; model change EUR 362,487.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Repository documents model-agnostic project/worker protocol, job isolation, API-key/account/credit ledger and preview/MP4 verification contracts.

Remaining limits

Real LTX-2.5 GPU hardware inference, third-party model license admission, secure production tenancy, billing integration and public deployment are not verified.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A local media-production control plane with tenant-scoped accounts, hashed API keys, queued generation jobs and separately operated inference workers. Internal credits reserve and settle usage; administrative controls support suspension, recovery and review. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-068 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
