Launch & Cislunar Transportation Engineering Platform

Assess launch and lunar transport options for your FusionLunar studies, compare their assumptions and review the evidence needed for further engineering.

Product overview

A transport-architecture research foundation for launch and lunar logistics choices.

Potential acquirers

- Aerospace consultancies
- Mission architecture teams
- Transport research groups

Documented functions

- Describe mission requirements
- Compare transport routes
- Screen architecture choices
- Review reliability and logistics assumptions
- Retain decision evidence

Available output types

Transport comparisons / Mission studies / Architecture review records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 15,000 · indicative USD 16,821

Identified edition: v0.1.0.dev0

Prototype · Conditional handover

Current scope and conditions

Present first-party transport-concept screening software, interface contracts, synthetic example, tests, documentation and retained software validation at the identified development commit. Physical vehicles, flight qualification, operational transport, external science and data rights, the separately owned FusionLunar asset and future engineering are excluded.

• Transport-architecture research software. Launch hardware, mission delivery and physical performance are excluded.

Conditions before handover

• Agree the exact software delivery manifest, release identity and recipient acceptance checks.

• Confirm the applicable rights holder and its authority to transfer the included first-party materials; the repository copyright notice names TrueLaneStudio.

• Reconcile build and test component versions, licences and release inventory; no dependency lockfile or completed SBOM is retained.

• Qualify the intended engineering use with appropriate evidence; synthetic screening and software tests do not establish flight performance, safety or operational reliability.

• Keep the FusionLunar interface and separately owned FusionLunar asset distinct; an interface contract does not establish a completed joint integration.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	15,000	16,821
Negotiation reference - low	12,000	13,457
Negotiation reference - high	18,750	21,026
Recreation cost estimate	50,000	56,070
Marketability cost scenario	34,425	38,604
Monetisation cost scenario	28,688	32,171
Risk-adjusted strategic reference	17,069	19,141
Weighted economic reference	31,097	34,872

Cost basis

Disclosed base/increment assumptions reconcile to the retained recreation anchor. Effort remains an analyst estimate for its original scope.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Milestone-conditioned reference

EUR 36,707; model change EUR 5,610.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Repository describes deterministic mission requirements, basic evaluator and PASS/FAIL/INCOMPLETE model contracts; no exact pinned project-wide acceptance reproduced by this portfolio audit.

Remaining limits

Not flight-qualified trajectory, hardware performance, launch cadence, measured reliability, mission safety or commercially modeled feasibility.

Development position

v0.2 — Stateful refueling, depot inventory and multi-launch departure gates

Acquisition evidence profile

Technical scope: P — A transport-architecture research foundation for launch and lunar logistics choices. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-098 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
