Mission-to-Execution Engineering Framework

Turn your project aims into reviewed requirements, dependency-aware plans and planning documents with traceable decisions.

Product overview

An engineering workbench prototype for traceable requirements and execution planning.

Potential acquirers

- Engineering consultancies
- Programme software vendors
- Product development teams

Documented functions

- Record mission requirements
- Organise capability and work packages
- Review dependencies and blockers
- Prepare priority-aware plans
- Generate auditable project reports

Available output types

Mission charters / Requirement and plan records / Execution review packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 16,500 · indicative USD 18,503

Identified edition: 0.1.0

Prototype · Scope closure required

Current scope and conditions

Existing first-party offline mission, requirements, dependency-planning and document-generation software on main v0.1 plus separately frozen unmerged v0.2/v0.3 traceability and feasibility-declaration software, tests and methodology documents. Generated plans are design outputs; independently established feasibility, copied cross-project IP, automatic engineering or execution, hosted services and future implementation are excluded.

• A planning and requirements prototype. Review records do not certify engineering or operational feasibility.

• The delivery perimeter and transfer requirements need further review before terms can be finalised.

Conditions before handover

• Complete explicit first-party rights, component-obligation and definitive transfer documentation; a repository licence file is not currently identified.

• Agree main v0.1 and any expressly included unmerged v0.2/v0.3 delivery sources; the stacked candidate has not been integrated into main.

• Freeze the delivery manifest, supported environment and recipient acceptance of the agreed planning and traceability workflows.

• Independently review actual evidence and feasibility for your use case; software labels and supplied PASS declarations do not establish real-world feasibility.

• Keep automatic implementation, deployment, scientific certification and incorporation of other project rights outside the offered scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	16,500	18,503
Negotiation reference - low	13,200	14,802
Negotiation reference - high	20,625	23,129
Recreation cost estimate	55,000	61,677
Marketability cost scenario	46,283	51,902
Monetisation cost scenario	42,694	47,877
Risk-adjusted strategic reference	22,948	25,734
Weighted economic reference	39,577	44,382

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 47,396; model change EUR 7,819.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source offers deterministic mission-charter, dependency planning, requirements traceability and draft volume build; v0.5 PR #6 says separately tested 110/110 local archive but exact transferred GitHub head not reexecuted.

Remaining limits

No general autonomous engineering, completed real-world mission or independently validated design; stacked PR #6 depends on #5 release and exact-source tests.

Development position

feat(v0.5): source-grounded VolumeForge drafts and review checkpoints; feat(v0.4): architecture alternatives, hard decision gates and ADR traceability; feat(v0.3): mission objectives, feasibility declarations and research experiments; feat: UMEEF v0.2 traceability graph and evidence integrity auditing

Acquisition evidence profile

Technical scope: P — An engineering workbench prototype for traceable requirements and execution planning. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R0 — No repository licence evidence identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-104 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
