Modular Aerospace Research Platform

Turn aerospace observations into replayable research cases, compare declared evidence and keep uncertainty visible.

Product overview

A research workbench for organising aerial observations and retaining uncertain events for review.

Potential acquirers

- Aerospace research groups
- Observation-network developers
- Scientific data teams

Documented functions

- Review aerial-event observations
- Compare observations from multiple locations
- Retain events requiring investigation
- Document uncertainty
- Cross-reference permitted external records

Available output types

Event dossiers / Observation archives / Review records

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 61,000 · indicative USD 68,405

Identified edition: 0.1.0

Prototype · Conditional handover

Current scope and conditions

Current first-party main software only as independently defined from unmerged development. The 3 November EUR 61,000 ask and EUR 540,000 assumed recreation budget include unmerged STELLA development and cannot be presented as an asking price for the current main v0.1.0 software. The frozen 7 October source dossier quoted EUR 45,000 for its historical v0.1.0 scope; that too is not a new quote. First establish exact offered release/development scope, source acceptance and a new complete work budget.

• Research observation software; calibrated field performance and combined sensor interpretation require separate qualification.

• The 3 November EUR 61,000 ask and EUR 540,000 assumed recreation budget include unmerged STELLA development and cannot be presented as an asking price for the current main v0.1.0 software. The frozen 7 October source dossier quoted EUR 45,000 for its historical v0.1.0 scope; that too is not a new quote. First establish exact offered release/development scope, source acceptance and a new complete work budget.

Conditions before handover

• Reconcile exact main/candidate SHA, evidenced first-party scope, and seller asking-price basis before any binding AS-IS transfer.

• Agree and freeze the historical-main and separately reviewed v0.4.2 development delivery perimeter; the development candidate has not been merged.

• Reconcile the identifier in development documentation with the authoritative portfolio identifier TA-IP-001 before freezing the delivery package.

• Complete the agreed component inventory, obligations review and recipient acceptance of the bounded software package.

• Keep physical calibration, independently qualified annotations, field performance and the blocked v1.0/Horizon programme outside the demonstrated scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	61,000	68,405
Negotiation reference - low	47,500	53,267
Negotiation reference - high	74,500	83,544
Recreation cost estimate	540,000	605,556
Marketability cost scenario	351,135	393,763
Monetisation cost scenario	309,825	347,438
Risk-adjusted strategic reference	174,104	195,240
Weighted economic reference	328,128	367,963

Cost basis

The recreation anchor combines an identified base with separately scoped implementation work. The base remains a seller assumption; the scoped component has a role/work-package reproduction budget. Each component is counted once.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 386,507; model change EUR 58,379.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Main README, acquisition dossier and main Git tree inspected; compared with the frozen original source, current main adds metadata and documentation rather than the unmerged STELLA candidate. Candidate tests are source-reported only.

Remaining limits

The source PR reports nine unresolved NGS velocity disagreements; independent field-calibration, source-head Colab qualification, physical UAP conclusions, legal title and buyer transfer remain unresolved.

Development position

STELLA v0.6.11 — complete joint association and reproducible CPU verification

Acquisition evidence profile

Technical scope: P — A research workbench for organising aerial observations and retaining uncertain events for review. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-001 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
