ModularKey Cryptanalysis Platform

Explore classical ciphers, test candidate interpretations and review your cryptanalysis results.

Product overview

Cipher-family evaluation contracts, calibrated abstention and explicit refusal when development-derived scores are insufficient.

Potential acquirers

- Cryptography education providers
- Historical-text researchers
- Security research teams

Documented functions

- Analyse supported classical cipher families
- Plan and compare analysis methods
- Review candidate and exploratory family evidence
- Assess representative calibration examples
- Export comparable research results

Available output types

Candidate interpretations / Comparison reports / Calibration summaries

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 102,500 · indicative USD 114,944

Identified edition: 2.14.0

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party 2.14.0 source, documentation and retained evidence: Cipher-family evaluation contracts, calibrated abstention and explicit refusal when development-derived scores are insufficient. No qualified general cipher-family classifier, cryptanalytic breakthrough or production detection accuracy.

• No qualified general cipher-family classifier, cryptanalytic breakthrough or production detection accuracy.

• First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

• Freeze the 2.14.0 first-party delivery and reconcile source-specific acceptance records.

• Agree and freeze the exact first-party delivery edition, rights, third-party obligations and excluded content.

• Review source-specific reproducibility, component and security documentation under agreed confidentiality.

• Complete the relevant application qualification and recipient handover acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	102,500	114,944
Negotiation reference - low	82,000	91,955
Negotiation reference - high	128,125	143,679
Recreation cost estimate	483,500	542,197
Marketability cost scenario	355,373	398,515
Monetisation cost scenario	333,615	374,116
Risk-adjusted strategic reference	121,703	136,478
Weighted economic reference	301,269	337,843

Cost basis

Earlier recreation anchor retained once; its prior coverage and uncertainty remain. Added only the individually described implementation work. 64 assumed hours at EUR 94/hour, 15% coordination allowance; EUR 6,500 adopted recreation increment and EUR 1,500 asking-reference increment. No premium for version labels, test counts, scientific claims, future work or unrelated assets.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source records 360 pytest tests, 18 groups and seven gates for the bounded CPU edition; historical false-negative and out-of-distribution limitations remain material.

Remaining limits

No qualified general cipher-family classifier, cryptanalytic breakthrough or production detection accuracy.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Cipher-family evaluation contracts, calibrated abstention and explicit refusal when development-derived scores are insufficient. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-007 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
