Adaptive Neurodynamics Engineering Platform

Explore learning and memory in brain-inspired research models and compare their observed behaviour.

Product overview

ANEP is an experimental spiking-neural-dynamics research asset with sparse topology and short-horizon memory studies. Agree the included development-branch source and historical evidence package explicitly.

Potential acquirers

- Computational neuroscience groups
- AI research teams
- Scientific software vendors

Documented functions

- Run neural-dynamics experiments
- Compare declared study settings
- Retain reproducible benchmark records
- Review experimental outcomes
- Prepare research evidence

Available output types

Experiment records / Benchmark reports / Research documentation

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 45,000 · indicative USD 50,463

Identified edition: 18.3

Prototype · Conditional handover

Current scope and conditions

Seller-owned first-party rights plus specifically agreed transferable software/delivery artifacts; website displays and third-party ownership rights excluded from standalone software asset value.

• Computational neural-dynamics research. Biological equivalence and experimental outcomes require separate evidence.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• Third-party licensing and obligations documentation remains incomplete.

• A security assessment or an explicit statement of its absence is required before acceptance.

• An explicit delivery manifest and handover scope remain to be agreed.

• Agree and freeze the exact development-branch delivery perimeter before transfer; draft status is retained.

• Full regression and packaging acceptance of the exact candidate remains outstanding; bounded research evidence is not full release acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	45,000	50,463
Negotiation reference - low	35,000	39,249
Negotiation reference - high	55,000	61,677
Recreation cost estimate	400,000	448,560
Marketability cost scenario	336,600	377,463
Monetisation cost scenario	229,500	257,361
Risk-adjusted strategic reference	166,898	187,159
Weighted economic reference	271,634	304,610

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 323,096; model change EUR 51,462.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Main README describes block-sparse synapses, FEP-inspired latent inference and Colab GPU tooling; no source-specific current benchmark results in inspected README.

Remaining limits

Biological fidelity, consciousness, large-scale neural benchmark performance and production GPU capacity not established.

Development position

Bootstrap evidence-first ANEP v18.4 local adaptive budget baseline

Acquisition evidence profile

Technical scope: P — ANEP is an experimental spiking-neural-dynamics research asset with sparse topology and short-horizon memory studies. Agree the included development-branch source and historical evidence package explicitly. The offered edition and material boundaries govern review.

Evidence and validation: E4 — E3 plus repository-retained independent/external validation evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-037 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
