Evidence-Governed Intelligence Platform

An in-memory evidence-governed reference implementation combining provenance, policy and authority checks with current risk controls and a separately authorized experiment lifecycle.

Product overview

Evidence-governed digital-twin layer added to the existing risk and experimentation contracts.

Potential acquirers

- Evidence-workflow software vendors
- Enterprise governance and compliance teams
- Controlled research-workflow developers

Documented functions

- Retain typed evidence and provenance records
- Recheck policy and scoped authority at governed actions
- Track explicit risks, controls, monitoring and stop state
- Register assumptions, alternatives and experiment criteria before execution
- Require independent declared human review before candidate promotion

Available output types

Evidence and policy-decision records / Authority and approval assessments / Auditable governance workflow packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 24,000 · indicative USD 26,914

Identified edition: R7 / package 0.5.0.dev1

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party R7 / package 0.5.0.dev1 source, documentation and retained evidence: Evidence-governed digital-twin layer added to the existing risk and experimentation contracts. Reference software contracts do not establish a calibrated physical twin, real experiments, production integration or independent rights clearance.

• Reference software contracts do not establish a calibrated physical twin, real experiments, production integration or independent rights clearance.

• First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

• Freeze the R7 / package 0.5.0.dev1 first-party delivery and reconcile source-specific acceptance records.

• Freeze the exact source edition, agreed first-party work, rights and exclusions.

• Agree persistence and integration boundaries separately from the internally qualified in-memory reference implementation.

• Review source-specific reproducibility, component and security evidence under agreed confidentiality.

• Complete intended-use and recipient-environment acceptance before relying on the identified outputs.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	24,000	26,914
Negotiation reference - low	19,200	21,531
Negotiation reference - high	30,000	33,642
Recreation cost estimate	80,000	89,712
Marketability cost scenario	67,320	75,493
Monetisation cost scenario	62,100	69,639
Risk-adjusted strategic reference	33,380	37,432
Weighted economic reference	57,567	64,556

Cost basis

Earlier recreation anchor retained once; its prior coverage and uncertainty remain. Added only the individually described implementation work. 96 assumed hours at EUR 94/hour, 15% coordination allowance; EUR 10,000 adopted recreation increment and EUR 3,000 asking-reference increment. No premium for version labels, test counts, scientific claims, future work or unrelated assets.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Merged R7 record: 334 passing tests, 109 protected baseline files and a verified 128-file source manifest.

Remaining limits

Reference software contracts do not establish a calibrated physical twin, real experiments, production integration or independent rights clearance.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — Evidence-governed digital-twin layer added to the existing risk and experimentation contracts. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Current local replay passes its executed tests. The repository qualification also checks protected earlier contracts, requirement coverage and the bounded R4-R6 example flows. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R1 — Repository licence file identified. Source-specific diligence and recipient acceptance remain separate.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Source-specific diligence and recipient acceptance remain separate.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. Source-specific diligence and recipient acceptance remain separate.

Buyer information and next step

Quote TA-IP-095 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
