# Quantum Cryptanalysis Engineering Platform

Compare bounded factorisation experiments and quantum-resource engineering assumptions with reproducible research evidence.

## Product overview

QCEP is a research platform for bounded factorisation, resource-estimation scenarios, physical route/factory co-search and stochastic inventory studies with explicit calibration limits.

## Potential acquirers

- Quantum-computing research teams
- Scientific software vendors
- Mathematical research groups

## Documented functions

- Run bounded factorisation and arithmetic studies
- Compare physical routes, factories and corridor scenarios
- Study stochastic inventory and refinement policies
- Review held-out resource-model limitations
- Reproduce installed CLI and package-parity checks

## Available output types

Feasibility reports / Resource comparisons / Study records

# Defined work. Separate written terms.

## Seller asking reference / AS IS

EUR 152,000 · indicative USD 170,453

Identified edition: 0.23.0

Developed software · Conditional handover

## Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 0.23.0. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• No calibrated QPU forecast, ECDLP/secp256k1 circuit, real-wallet targeting capability, universal hardware advantage or completed post-quantum security assessment is established.

## Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• A security assessment or an explicit statement of its absence is required before acceptance.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

# Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

| Price / model reference | EUR | USD - indicative |
|---|---|---|
| Seller asking reference | 152,000 | 170,453 |
| Negotiation reference - low | 121,500 | 136,250 |
| Negotiation reference - high | 192,500 | 215,870 |
| Recreation cost estimate | 710,000 | 796,194 |
| Marketability cost scenario | 543,150 | 609,088 |
| Monetisation cost scenario | 543,150 | 609,088 |
| Risk-adjusted strategic reference | 324,072 | 363,414 |
| Weighted economic reference | 508,185 | 569,879 |

## Cost basis

Recreation estimate: EUR 700,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 710,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

# Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

## Retained source evidence

Source committed validation JSON records 263 local passing tests, zero failed, wheel install and ZIP integrity; GitHub Actions and remote-host test absent.

## Remaining limits

No demonstrated quantum cryptanalytic break of modern cryptography, no calibrated real quantum hardware performance; ECDLP/secp256k1 modules absent.

## Development position

No open pull request at the captured source snapshot.

## Acquisition evidence profile

Technical scope: V — QCEP is a research platform for bounded factorisation, resource-estimation scenarios, physical route/factory co-search and stochastic inventory studies with explicit calibration limits. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

## Buyer information and next step

Quote TA-IP-042 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
