Research Intelligence Fabric

Organise research programmes, manage review work and keep your study records accessible.

Product overview

An event-driven research orchestration platform with authenticated human review, durable PostgreSQL/outbox state, RabbitMQ workers, guarded dual-source synthesis and bounded operational observability.

Potential acquirers

- Research organisations
- Enterprise workflow vendors
- Programme-management teams

Documented functions

- Coordinate durable research and human approval workflows
- Retain both source streams in review packages
- Guard synthesis and untrusted-source boundaries
- Track outbox retries and worker health
- Provide a Docker live-qualification runner that can produce PASS/FAIL evidence when independently executed

Available output types

Programme histories / Review records / Operational reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 282,000 · indicative USD 316,235

Identified edition: 4.4.0

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 4.4.0. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• Evidence coverage is a structural measure, not a probability of truth. Provider results, source rights, target-environment security and operational acceptance require separate review.

• Research Intelligence Fabric 4.4.0 documents a PostgreSQL transactional outbox, RabbitMQ workers, authenticated human review, guarded dual-source synthesis and a separate live Docker qualification runner. A configured runner is not proof that the exact current multi-service stack passed with authorized live provider credentials. The EUR 282,000 dated ask is distinct from an older EUR 280,000 source dossier; EUR 856,500 recreation includes an EUR 850,000 unbroken-down seller anchor plus EUR 6,500 scoped work. No independent hosted reliability or current market value is established.

Conditions before handover

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• Release identity and provenance evidence remain incomplete.

• An explicit delivery manifest and handover scope remain to be agreed.

• Run the clean-tracked-source Docker qualification with authorized credentials, record exact-main PASS/FAIL artifact and exclude secrets from buyer evidence.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	282,000	316,235
Negotiation reference - low	226,500	253,997
Negotiation reference - high	352,500	395,294
Recreation cost estimate	856,500	960,479
Marketability cost scenario	1,083,473	1,215,007
Monetisation cost scenario	1,329,716	1,491,144
Risk-adjusted strategic reference	1,093,155	1,225,864
Weighted economic reference	1,079,367	1,210,402

Cost basis

Recreation estimate: EUR 850,000 retained scope component plus EUR 6,500 for the explicitly scoped implementation work budget, giving EUR 856,500. The scoped budget assumes 64 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source documents identifier-first event schema, transactional outbox, heartbeat diagnostics and policy-limited source packets; previous PR #3 includes a live Docker E2E gate. No newly run tests here.

Remaining limits

A documented Docker E2E path is not independently certified production hosting; provider calls, storage, secure operations, external licenses and scaling require verification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — An event-driven research orchestration platform with authenticated human review, durable PostgreSQL/outbox state, RabbitMQ workers, guarded dual-source synthesis and bounded operational observability. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-011 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
