Secure Actuation Integrity Platform

Review permissions and decision records before authorising a controlled resource action.

Product overview

Versioned evidence-receipt and handover lifecycle with counterparty-policy acknowledgement, withdrawal and supersession controls.

Potential acquirers

- Security software vendors
- Device research groups
- Assurance product teams

Documented functions

- Evaluate action permissions
- Simulate secure-resource scenarios
- Review qualification decisions
- Prepare portable handovers
- Record buyer acceptance evidence

Available output types

Authorisation records / Scenario reports / Transfer packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 428,500 · indicative USD 480,520

Identified edition: 2.16.0

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party 2.16.0 source, documentation and retained evidence: Versioned evidence-receipt and handover lifecycle with counterparty-policy acknowledgement, withdrawal and supersession controls. Transfer readiness remains false: required external counterparty evidence is absent. No verified real counterparty receipt, actuation authority or operational certification.

• Transfer readiness remains false: required external counterparty evidence is absent. No verified real counterparty receipt, actuation authority or operational certification.

• First-party rights, exact delivery and recipient acceptance require project-specific agreement.

Conditions before handover

• Freeze the 2.16.0 first-party delivery and reconcile source-specific acceptance records.

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• Complete the legitimate transfer-package acceptance and closure prerequisites; the retained reports currently state that the package is not ready.

• Produce the agreed delivery manifest and handoff bundle, with the required trust, verification and receipt evidence.

• Reconcile the existing component inventory with the agreed current release and its development/build dependencies.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	428,500	480,520
Negotiation reference - low	342,800	384,416
Negotiation reference - high	535,625	600,650
Recreation cost estimate	1,762,000	1,975,907
Marketability cost scenario	2,127,615	2,385,907
Monetisation cost scenario	2,616,570	2,934,222
Risk-adjusted strategic reference	2,146,628	2,407,229
Weighted economic reference	2,140,657	2,400,533

Cost basis

Earlier recreation anchor retained once; its prior coverage and uncertainty remain. Added only the individually described implementation work. 112 assumed hours at EUR 94/hour, 15% coordination allowance; EUR 12,000 adopted recreation increment and EUR 3,500 asking-reference increment. No premium for version labels, test counts, scientific claims, future work or unrelated assets.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source validation reports 483/483 tests on Python 3.10 and 3.13 at the identified code checkpoint. Later documentation is not independently reaccepted.

Remaining limits

Transfer readiness remains false: required external counterparty evidence is absent. No verified real counterparty receipt, actuation authority or operational certification.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Versioned evidence-receipt and handover lifecycle with counterparty-policy acknowledgement, withdrawal and supersession controls. The offered edition and material boundaries govern review.

Evidence and validation: E4 — E3 plus repository-retained independent/external validation evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R3 — R2 plus SBOM/lockfile and provenance/rights-supporting evidence identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-079 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
