Software Asset Provenance & Qualification Platform

Repository provenance and qualification software with component/evidence inventories and a candidate release workflow that checks structured build/test evidence, signatures and cross-file bindings.

Product overview

Repository provenance and qualification software with component/evidence inventories and a candidate release workflow that checks structured build/test evidence, signatures and cross-file bindings.

Potential acquirers

- Software assurance vendors
- IP transaction advisers
- Engineering organisations

Documented functions

- Inventory declared source and component evidence
- Apply explicit qualification policy and provenance checks
- Bind structured test evidence to a repository fingerprint
- Verify signatures and connected release-evidence records
- Prepare a bounded asset dossier from allowlisted evidence

Available output types

Asset dossiers / Release records / Qualification reports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 240,000 · indicative USD 269,136

Identified edition: 0.4.0 retained scope / 0.5.0 release-assurance candidate

Developed software · Conditional handover

Current scope and conditions

The earlier specifically priced provenance/qualification scope is retained. The 0.5 release-assurance implementation is disclosed as development scope with unresolved compatibility tests and no added monetary premium. Legal title, independent certification and production readiness are excluded.

• Current local replay reports failed legacy-policy tests: expected IP_READY outcomes now evaluate to FAILED. Complete 0.5 release acceptance is unresolved.

• Structured release receipts and signatures verify supplied technical bindings; they do not independently prove authorship, legal ownership or the truth of reviewer declarations.

• Real isolated-build infrastructure, security review, distribution rights and recipient acceptance remain separate. Interoperability envelopes do not establish a SLSA level or standards certification.

Conditions before handover

• Resolve and repeat the stated current-candidate regression and complete release gates before representing that candidate as accepted.

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	240,000	269,136
Negotiation reference - low	190,000	213,066
Negotiation reference - high	300,000	336,420
Recreation cost estimate	850,000	953,190
Marketability cost scenario	1,026,375	1,150,977
Monetisation cost scenario	1,319,625	1,479,827
Risk-adjusted strategic reference	1,035,547	1,161,262
Weighted economic reference	1,044,141	1,170,900

Cost basis

The retained recreation anchor has no explicit per-role work-package budget in the current methodology register. It remains a low-confidence seller estimate requiring reconstruction before reliance. Review on 2026-11-03: The earlier specifically priced provenance/qualification scope is retained. The 0.5 release-assurance implementation is disclosed as development scope with unresolved compatibility tests and no added monetary premium. Legal title, independent certification and production readiness are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README documents local verify script, build/test evidence checks, signed-release fixture, SBOM-tamper rejection and controlled commercial finalizer.

Remaining limits

Self-issued signatures and seller-side evidence do not establish independent chain of title, third-party IP clearance, FTO, market value or production security.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — Repository provenance and qualification software with component/evidence inventories and a candidate release workflow that checks structured build/test evidence, signatures and cross-file bindings. The offered edition and material boundaries govern review.

Evidence and validation: E4 — Current local replay reports failed legacy-policy tests: expected IP_READY outcomes now evaluate to FAILED. Complete 0.5 release acceptance is unresolved. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R3 — R2 plus SBOM/lockfile and provenance/rights-supporting evidence identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-063 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
