Synthetic Consciousness Engineering Platform

Explore controlled simulations of adaptive behaviour and compare recorded experiments to assess questions for further research.

Product overview

An experimental research asset for testable properties of synthetic-consciousness theories.

Potential acquirers

- Cognition research groups
- AI research teams
- Scientific software vendors

Documented functions

- Run controlled computational studies
- Compare candidate theoretical properties
- Review simpler research baselines
- Retain experiment histories
- Support repeatable campaign recovery

Available output types

Experiment records / Theory comparisons / Research recovery material

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 60,000 · indicative USD 67,284

Identified edition: v0.4.0.dev0

Prototype · Conditional handover

Current scope and conditions

Present first-party offline research software, corrected experimental derivative, implemented campaign-audit, multi-seed study and resumable-experiment controls, documentation and retained historical/final/checkpoint material counted once. Missing original historical data and weights, proven consciousness, numerical equivalence, external platform ownership, third-party rights, full-scale future GPU qualification and future research are excluded.

• Experimental research software. Consciousness is a research subject; demonstrated sentience is not offered.

Conditions before handover

• Freeze the active research software and seven-file final-evidence delivery manifest; distinguish the corrected derivative from preserved historical fragments.

• Resolve archive-specific authorship, provider terms, third-party obligations and nonstandard historical licence labels in the definitive agreement.

• Pin the agreed runtime and build components and produce a release-specific component and licence inventory; no lockfile or completed SBOM is retained.

• Reconcile the complete intermediate checkpoint inventory and incorrect checkpoint-checksum field. One step-50 metadata file and seven binary parts are present but the parts were not restored or byte-verified, and the overall checkpoint-part manifest is absent; verify any expressly included materials or define their exclusion.

• Complete recipient reproduction and acceptance for the agreed environment; the retained GPU campaign was not rerun and current CPU checks do not establish GPU/CPU equivalence.

• Preserve the scientific limits: missing original data and weights remain missing, abstract simulation values are not money or measured physical quantities, and no consciousness claim is validated.

• Reconcile the complete recorded checkpoint inventory with the delivered binary bytes and reproduce the agreed research scope. This review did not restore or numerically audit the archive; the historical mislabeled checksum field remains an explicit limitation.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	60,000	67,284
Negotiation reference - low	48,000	53,827
Negotiation reference - high	75,000	84,105
Recreation cost estimate	200,000	224,280
Marketability cost scenario	168,300	188,732
Monetisation cost scenario	114,750	128,681
Risk-adjusted strategic reference	83,449	93,580
Weighted economic reference	135,817	152,305

Cost basis

Disclosed base/increment assumptions reconcile to the retained recreation anchor. Effort remains an analyst estimate for its original scope.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Milestone-conditioned reference

EUR 161,548; model change EUR 25,731.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Repository retains reconstructed 1000-step campaigns and checkpoint replay tools; original historical v33.1 NPZ unrecovered, five-seed 400-agent replication NOT_RUN.

Remaining limits

No synthetic consciousness, sentience, faithful historical reconstruction, independently replicated physical/biological effects or production GPU campaign.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — An experimental research asset for testable properties of synthetic-consciousness theories. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-099 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
