The Stone Universe Research Framework

A theoretical-physics research framework with classical lattice and scalar-field demonstrators, native source evolution and explicit symmetry, refinement and anisotropy counterexamples.

Product overview

A theoretical-physics research framework with classical lattice and scalar-field demonstrators, native source evolution and explicit symmetry, refinement and anisotropy counterexamples.

Potential acquirers

- Computational-physics research software vendors
- Theoretical and analogue-model research groups
- Numerical-methods and scientific-software teams

Documented functions

- Run bounded lattice and scalar matter-field analogues
- Compare proper cubic rotations with continuous-isotropy claims
- Inspect native-source refinement and mesh-phase effects
- Stress directional effects across time and initial preparations
- Separate diagnostic probe contributions under explicit assumptions

Available output types

Classical analogue and scalar-model research records / Conservation, force and finite-domain diagnostics / Model-consistency and counterexample evidence

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 27,500 · indicative USD 30,839

Identified edition: R2l / native lattice anisotropy and mechanism diagnostics

Research software · Rights and handover review required

Current scope and conditions

Previously budgeted classical lattice and R2g diagnostic work is retained once. Only implemented R2h-R2l symmetry, native-source, dynamic anisotropy and mechanism-probe software with its regression/documentation is added. R2m, physical gravity, hardware, observed data and future research are excluded.

• Current local replay passes its executed tests through R2l. Retained source-specific CPU acceptance records cover the separate research stages; R2m remains outside this offered source edition.

• Proper cubic covariance, source averaging and finite numerical agreement do not establish continuous rotational symmetry, universal free fall, Einstein dynamics or physical spacetime grains.

• The source asserts proprietary status, but dedicated licence/transfer terms and complete component/handover review remain open. No empirical gravitational discovery is established.

Conditions before handover

• Freeze the specifically agreed first-party source edition, documents, rights and exclusions.

• Complete the dedicated licence/transfer notice and release-specific component and delivery record.

• Review retained internal CPU evidence and reproduce representative recipient cases.

• Keep later research candidates, unsupported physical claims and third-party works outside the transfer scope.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	27,500	30,839
Negotiation reference - low	22,500	25,232
Negotiation reference - high	34,500	38,688
Recreation cost estimate	92,000	103,169
Marketability cost scenario	35,581	39,901
Monetisation cost scenario	23,460	26,308
Risk-adjusted strategic reference	7,270	8,153
Weighted economic reference	37,353	41,888

Cost basis

The retained priced scope and explicitly non-overlapping implementation budgets reconcile below. Effort and prices remain seller assumptions, not actual expenditure, independent quotations or established market value. Previously budgeted classical lattice and R2g diagnostic work is retained once. Only implemented R2h-R2l symmetry, native-source, dynamic anisotropy and mechanism-probe software with its regression/documentation is added. R2m, physical gravity, hardware, observed data and future research are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source R2l acceptance JSON records 56/56 owner and local CPU tests, 781 matching diagnostics; R2m PR reports 96/96 local tests.

Remaining limits

R2m independent Colab evidence pending; no emergent gravity metric, SO(3) isotropy, independent physical observation or validation of spacetime microstructure.

Development position

R2m: exact proper-cubic lattice covariance with persistent source anisotropy

Acquisition evidence profile

Technical scope: R — A theoretical-physics research framework with classical lattice and scalar-field demonstrators, native source evolution and explicit symmetry, refinement and anisotropy counterexamples. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Current local replay passes its executed tests through R2l. Retained source-specific CPU acceptance records cover the separate research stages; R2m remains outside this offered source edition. Independent recipient and intended-use acceptance remain separate.

Rights and component obligations: R0 — Proprietary status is asserted in the research policy, but no dedicated repository licence or transfer notice is identified. First-party title, component obligations and delivery terms require specific review.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Source-specific diligence and recipient acceptance remain separate.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete. Source-specific diligence and recipient acceptance remain separate.

Buyer information and next step

Quote TA-IP-117 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
