Universal Kernel Machine

Evaluate representation-learning experiments, compare matched model outputs and organise resumable research campaigns with evidence checks.

Product overview

Experimental representation-learning software with controlled comparison harnesses, source-bound evidence review and resumable research-campaign execution.

Potential acquirers

- Machine-learning research teams
- Learning-framework and evaluation-tool vendors
- Research-intensive technology companies

Documented functions

- Train supported feature-driven learning models
- Run bounded comparator and robustness evaluations
- Review evidence against predeclared claim requirements
- Plan and shard deterministic research campaigns
- Resume execution and re-audit campaign evidence

Available output types

Experiment records / Matched-comparison reports / Campaign plans and execution ledgers / Evidence and claim-readiness assessments

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 69,000 · indicative USD 77,377

Identified edition: V59 / package 0.4.0

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation and documentation for V59 / package 0.4.0. The previously priced learning, training and prototype foundations are reused once. The estimate adds only the implemented evidence/comparison and resumable campaign software. Dataset rights, GPU campaign execution, claimed performance gains, scientific novelty and production qualification are excluded.

• An experimental feature-driven learning implementation; graph-aware models are comparators rather than hidden components of the core model.

• Local synthetic checks validate software and evidence handling, not scientific superiority, general robustness or completion of the planned benchmark campaign.

• External datasets, optional benchmark components, empirical campaign execution and production qualification require separate rights and acceptance.

Conditions before handover

• Freeze the source-specific delivery edition, transferable rights and exclusions.

• Review component obligations, source-specific reproducibility and security evidence under agreed confidentiality.

• Complete intended-use and recipient-environment acceptance before relying on the identified outputs.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	69,000	77,377
Negotiation reference - low	53,000	59,434
Negotiation reference - high	85,000	95,319
Recreation cost estimate	584,500	655,458
Marketability cost scenario	491,857	551,568
Monetisation cost scenario	335,357	376,069
Risk-adjusted strategic reference	243,879	273,486
Weighted economic reference	396,925	445,112

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions, not actual expenditure, independent quotations or market value. The previously priced learning, training and prototype foundations are reused once. The estimate adds only the implemented evidence/comparison and resumable campaign software. Dataset rights, GPU campaign execution, claimed performance gains, scientific novelty and production qualification are excluded.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Milestone-conditioned reference

EUR 472,124; model change EUR 75,199.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source describes hash-chained campaign/shards, fail-closed dataset/model/seed gates and a 155-task planned campaign; no complete campaign results in reviewed README.

Remaining limits

The planned campaign is not completed evidence, and robust superiority, a novel kernel family or production model is unqualified.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — Experimental representation-learning software with controlled comparison harnesses, source-bound evidence review and resumable research-campaign execution. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-024 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
