Universal-Systems-Intelligence-Engine

Model connected systems, compare scenarios and examine bounded offline forecast studies with traceable evidence.

Product overview

A research engine for modelling connected systems, comparing bounded decisions and examining reproducible offline forecast studies.

Potential acquirers

- Digital-twin vendors
- Systems research groups
- Engineering consultancies

Documented functions

- Model connected-system scenarios
- Compare bounded forecast and decision studies
- Organise governed research inputs
- Review separated evaluation evidence
- Export portable offline study packages

Available output types

Scenario comparisons / Research evaluation summaries / Portable evidence packages

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 64,000 · indicative USD 71,770

Identified edition: 0.7.0 / Q2-C6 research development

Prototype · Scope closure required

Current scope and conditions

Specifically agreed first-party 0.7.0 foundations and implemented research extensions through Q2-C6, documentation and retained developer evidence. The scope requires an agreed source edition and recipient acceptance.

• Independent predictive superiority and scientific or physical-system validity are not established.

• The implementation is research software; live integration, safe operational fallback and production acceptance require separate qualification.

Conditions before handover

• Agree and freeze the exact first-party delivery edition, rights, third-party obligations and excluded content.

• Review source-specific reproducibility, component and security documentation under agreed confidentiality.

• Complete the relevant application qualification and recipient handover acceptance.

• Complete the separately scoped release-assurance and handover conditions before operational use.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	64,000	71,770
Negotiation reference - low	50,500	56,631
Negotiation reference - high	80,000	89,712
Recreation cost estimate	213,000	238,858
Marketability cost scenario	171,092	191,863
Monetisation cost scenario	122,209	137,045
Risk-adjusted strategic reference	84,833	95,132
Weighted economic reference	141,602	158,792

Cost basis

The recreation estimate comprises the retained expressly priced scope and the separately disclosed non-overlapping implementation budgets. Historical anchors and each successive scoped increment reconcile in the calculation below. Equivalent effort is a seller estimate; market value, actual expenditure and independent quotations are not established. Reuses all priced modelling, forecasting and comparison foundations. Independent scientific replication, predictive-superiority claims, live integration and production acceptance are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Milestone-conditioned reference

EUR 168,130; model change EUR 26,528.

Conditional model sensitivity only; no future asking price, income forecast or accepted scientific result.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Source records 627/627 exact-Q2C6 repository tests and 41 command log verifications, portable evaluator replay; Q2-C7 draft has >=642-test gate NOT_RUN.

Remaining limits

Historical multi-domain Q2 prediction-improvement goal NOT_MET; external real prospective evaluation, authentic data custody and scientific independent superiority remain open. PR #43 not merged.

Development position

Q2-C7: bounded evaluator handoff with explicit absent evidence

Acquisition evidence profile

Technical scope: P — A research engine for modelling connected systems, comparing bounded decisions and examining reproducible offline forecast studies. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T1 — Implementation exists but core transfer evidence is incomplete. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-096 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
