Visual-Effects-Spatial-Computing-Platform

Create and animate local visual scenes, compare bounded effects and explore a limited 3D authoring workflow.

Product overview

A standalone visual-authoring development platform with 2D editing, animation and a limited experimental 3D workbench.

Potential acquirers

- Visual authoring software teams
- Creative-tool developers
- Interactive media R&D teams

Documented functions

- Create layered 2D scenes
- Edit timelines and keyframes
- Apply bounded visual-effect graphs
- Explore a limited local 3D scene
- Import and export supported bounded model files

Available output types

Editable scenes / Animation project files / Supported model exports

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 8,500 · indicative USD 9,532

Identified edition: 0.4.0 / R3 development alpha

Prototype · Conditional handover

Current scope and conditions

Specifically agreed first-party 0.4.0 / R3 development-alpha source and documentation. This asset remains standalone, with no shared code or integration with other portfolio projects.

• Development alpha with limited experimental 3D. Browser, GPU and device acceptance remain separate.

• XR, computer vision, production video encoding and integration with other portfolio projects are excluded.

Conditions before handover

• Agree and freeze the exact first-party delivery edition, rights, third-party obligations and excluded content.

• Review source-specific reproducibility, component and security documentation under agreed confidentiality.

• Complete the relevant application qualification and recipient handover acceptance.

• Preserve the standalone architecture and complete representative browser, GPU and device acceptance.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	8,500	9,532
Negotiation reference - low	7,000	7,850
Negotiation reference - high	10,500	11,775
Recreation cost estimate	29,000	32,521
Marketability cost scenario	22,185	24,878
Monetisation cost scenario	20,554	23,049
Risk-adjusted strategic reference	11,000	12,335
Weighted economic reference	19,648	22,033

Cost basis

The recreation estimate comprises the retained expressly priced scope and the separately disclosed non-overlapping implementation budgets. Historical anchors and each successive scoped increment reconcile in the calculation below. Equivalent effort is a seller estimate; market value, actual expenditure and independent quotations are not established. Reuses the standalone 2D editor and effect graph. Hardware/GPU acceptance, XR, computer vision, production packaging and any integration with other portfolio projects are excluded.

Coverage describes stated seller estimates only. All recreation amounts have an explicit scoped budget; effort remains an assumption.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

Repository reports 24 local R3 Node tests, previous headless DOM browser smoke; actual WebGL GPU rendering could not be validated in test environment.

Remaining limits

Full exact-source R0-R3 acceptance and real GPU/browser rendering not established; AR/VR/XR, production physics, CV, AI and native compositor not built.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: P — A standalone visual-authoring development platform with 2D editing, animation and a limited experimental 3D workbench. The offered edition and material boundaries govern review.

Evidence and validation: E2 — Tests plus validation/qualification evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R1 — Repository licence file identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T2 — Source, documentation, tests and licence evidence support bounded handover. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-107 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
