Distributed Compute Fabric

Coordinate remote computing work and review continuity across your distributed operations.

Product overview

A distributed-compute product foundation for buyer-operated services.

Documented functions

- Coordinate consent-based remote workers
- Review workload delivery
- Retain session continuity
- Track worker responses
- Prepare transferable service foundations

Potential buyer fit

Compute service developers / Enterprise infrastructure vendors / Private cloud teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Worker session records / Delivery evidence / Service foundation material

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/distributed-compute-fabric/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 229,000	**EUR 1,250,000**

Current repository documentation

Current main baseline: 0.11.0.

The 0.11.0 layer adds a runnable outbound-only reference worker agent over the loopback TLS 1.3 mutual-authentication transport, with bounded reconnect, heartbeat and command/lease handling. Its repository report records 212 passing tests. The qualified reference runtime remains loopback-scoped; production remote-provider operation and accelerator workloads need separate authorization and acceptance.

Material limitations: The qualified transport is loopback-scoped. Remote production deployments, provider consent and accelerator workloads need their own tests and authorization.

Next qualification step: Qualify remote transport and intended host/provider configurations with explicit authorization before production network exposure.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Development reviewed 16 October 2026: 0.11.0 (default-branch snapshot). Retained base EUR 1,200,000 plus separately estimated new work EUR 50,000 gives EUR 1,250,000. The new increment has a disclosed work budget; the older base remains a legacy seller assumption. No independent market-value increase is established.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-082-P: current documentation. TA-IP-082-C: financial-reference review, 16 October 2026. TA-IP-082-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
