Machine Cognition Research Framework

Study adaptation and decision behaviour through repeatable experiments and comparative review.

Product overview

A bounded cognition research framework for repeatable memory and adaptation experiments.

Documented functions

- Run controlled cognitive experiments
- Study memory and uncertainty
- Compare adaptation conditions
- Review component comparisons
- Export research evidence

Potential buyer fit

Cognition research groups / AI research teams / Scientific software developers

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Experiment records / Comparative studies / Research dossiers

Profile and full editable brief

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 85,000	**EUR 690,000**

Current repository documentation

Current main baseline: 0.8.0.

The 0.8.0 research prototype adds an explicitly trained predictive-state layer alongside its separate count-based adaptation. Training and held-out evaluation are separated and retained model checkpoints bind later research runs. This is a bounded deterministic research mechanism; general intelligence, autonomous action and human-equivalent cognition are not established.

Material limitations: Research mechanisms do not establish consciousness or general intelligence. Ordinary execution does not grant external action authority.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Development reviewed 16 October 2026: 0.8.0 (default-branch snapshot). Retained base EUR 650,000 plus separately estimated new work EUR 40,000 gives EUR 690,000. The new increment has a disclosed work budget; the older base remains a legacy seller assumption. No independent market-value increase is established.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-020-P: current documentation. TA-IP-020-C: financial-reference review, 16 October 2026. TA-IP-020-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
