Modular Aerospace Research Platform

Turn aerospace observations into replayable research cases, compare declared evidence and keep uncertainty visible.

Product overview

A research workbench for organising aerial observations and retaining uncertain events for review.

Documented functions

- Review aerial-event observations
- Compare observations from multiple locations
- Retain events requiring investigation
- Document uncertainty
- Cross-reference permitted external records

Potential buyer fit

Aerospace research groups / Observation-network developers / Scientific data teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Event dossiers / Observation archives / Review records

Profile and full editable brief

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 61,000	**EUR 540,000**

Current repository documentation

Current main baseline: 0.1.0.

Separate development: 0.6.3 - unmerged STELLA research foundation.

Main retains the 0.1.0 baseline. The separate 0.6.3 STELLA candidate adds offline sensor processing, calibrated geometry, replayable evidence comparison and retained actual NOAA context. Its build report records 1,043 tests and independent validation of 96 schemas; these are source-bound repository results, not executions by this website review. Field accuracy, cross-modality fusion and mission qualification remain open.

Material limitations: Representative hardware, calibrated field accuracy and general cross-modality fusion are not qualified. NOAA archive context does not by itself validate a reconstructed physical event.

Next qualification step: Complete the remaining S-014 comparison/fusion work and qualify representative calibrated field observations; keep the development candidate separate from main.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Development reviewed 16 October 2026: 0.6.3 (frozen unmerged snapshot). Retained base EUR 400,000 plus separately estimated new work EUR 140,000 gives EUR 540,000. The new increment has a disclosed work budget; the older base remains a legacy seller assumption. No independent market-value increase is established.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-001-P: current documentation. TA-IP-001-C: financial-reference review, 16 October 2026. TA-IP-001-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
