Signal Processing Universal Framework

Analyse your signals, compare processing results and keep your findings traceable.

Product overview

A signal-analysis foundation for repeatable studies across multiple application domains.

Documented functions

- Organise supplied signal records
- Run repeatable processing studies
- Review signal quality
- Coordinate domain-specific analysis
- Retain traceable results

Potential buyer fit

Scientific software vendors / Industrial analysis teams / Signal research groups

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Analysis records / Domain reports / Processing histories

Profile and full editable brief

https://thearchitect-max.github.io/MyProjects/projects/signal-processing-universal-framework/

The full editable brief accompanies this factsheet and retains the detailed product and transaction boundaries.

Status and commercial reference

SELLER ASKING REFERENCE	RECREATION ESTIMATE
EUR 150,000	**EUR 500,000**

Current repository documentation

Current main baseline: 1.23.0.

The 1.23.0 source includes the 1.19-1.22 input, retry-policy, registry and processor-identity hardening, plus precise event-subscription lifetime control. The framework retains its supplied-series reference domains, explicit temporal alignment and recovery evidence. Domain accuracy and representative live-instrument acceptance remain separately qualified. The retained v1.23.0 Colab record reports canonical 253/253 and independent unittest-discovery 253/253 passes at frozen code 32073ef1c45b490e0669acb995f20e891601ddc8. The current head adds evidence and documentation; this is source-bound Colab evidence, not a GitHub Actions result or a new execution by this website review.

Material limitations: Reference-domain results are supplied-series calculations. They do not certify live instruments, domain science or the accuracy of an arbitrary buyer dataset.

Next qualification step: Select the intended domain and validate representative inputs, reference outputs and operational acceptance on the agreed version.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Development reviewed 16 October 2026: 1.23.0 (default-branch snapshot). Retained base EUR 400,000 plus separately estimated new work EUR 100,000 gives EUR 500,000. The new increment has a disclosed work budget; the older base remains a legacy seller assumption. No independent market-value increase is established.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-016-P: current documentation. TA-IP-016-C: financial-reference review, 16 October 2026. TA-IP-016-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
