Plant Environment Decision Intelligence Platform

Assess plants against site conditions, manage versioned planting plans and compare the evidence behind retained assessment results.

Product overview

A plant-environment decision workbench for site suitability, versioned planting plans and evidence-backed comparison of retained assessments.

Documented functions

- Assess several candidate species against one site
- Manage owner-scoped projects, sites and planting zones
- Retain versioned planting-plan scenarios
- Export assessment inputs, results and integrity records
- Compare retained scenarios and explain material differences

Potential buyer fit

Garden-planning software vendors / Horticultural service firms / Landscape planning teams

Buyer profiles are positioning suggestions; they are not established customers or contracts.

Documented output types

Viability reports / Planning recommendations / Data-quality records

Profile and full editable brief

Current repository documentation

Current main baseline: Retained assessment-comparison build.

The current source provides bounded multi-species site assessment, owner-scoped projects, sites and zones, versioned plan scenarios, retained assessment exports and read-only scenario comparison. The comparison report records 112 Go tests, seven Python regressions and 376 file-runtime checks. Earlier native PostgreSQL evidence applies to earlier retained-evidence source; the new comparison backend still needs its own native qualification. Regional data, live weather and deployment acceptance remain separate.

Material limitations: Botanical and spatial data coverage, real weather behavior and horticultural field accuracy need region-specific acceptance. The new comparison route is not covered by the earlier native database campaign.

Next qualification step: Run the exact comparison build against native PostgreSQL, then qualify regional botanical/spatial data, authorized weather behavior and the intended deployment.

Documentation checked: 16 October 2026. Product tests were not rerun for this catalogue. Prior execution evidence, handover grades and financial assessments retain their individual dates and version scope.

Individual financial-reference review

Development reviewed 16 October 2026: retained assessment-comparison build (default-branch snapshot). Retained base EUR 900,000 plus separately estimated new work EUR 100,000 gives EUR 1,000,000. The new increment has a disclosed work budget; the older base remains a legacy seller assumption. No independent market-value increase is established.

Commercial and delivery boundary

Amounts are seller model estimates, not expenditure, a contractor quotation or independent market/income value. AS IS acquisition requires a written agreement defining first-party rights, exact delivery and acceptance. Third-party rights retain their own terms. Future development, hosting, support, customer content and credentials are separately scoped or excluded.

Source basis

TA-IP-008-P: current documentation. TA-IP-008-C: financial-reference review, 16 October 2026. TA-IP-008-A: retained dated handover assessment. Shared WIPO, Knab and limited Upwork sources provide method/rate context, not asset appraisals. Product tests were not rerun.
