The Stone Universe Research Framework

Explore finite lattice and scalar-field analogues, compare conservation and coupling diagnostics, and distinguish internal mathematical consistency from physical gravitational claims.

Product overview

A standalone theoretical-physics framework with classical lattice, matter-field and strain-source demonstrators, including finite-boundary, force-law and anisotropy diagnostics.

Potential acquirers

- Computational-physics research software vendors
- Theoretical and analogue-model research groups
- Numerical-methods and scientific-software teams

Documented functions

- Run classical lattice and variational matter-field models
- Derive bounded static strain-source terms within the stated model
- Compare periodic solvability and externally imposed boundaries
- Measure finite-model radial slopes and directional sensitivity
- Report conservation checks and nonuniversality counterexamples

Available output types

Classical analogue and scalar-model research records / Conservation, force and finite-domain diagnostics / Model-consistency and counterexample evidence

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 19,500	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: R2g / strain-source, boundary and force-law diagnostics

• Retained acceptance records and 316 current-source local tests support committed software through R2g. The R2h rotational-averaging candidate is outside the offered accepted scope.

• Scalar dynamics, coupling choices and the Dirichlet boundary are model assumptions. Strain-source anisotropy and finite-boundary sensitivity remain explicit; a point-source comparator does not establish isotropy of the original source. Universal gravity, Einstein-equation derivation and emergent physical spacetime are not established.

• The source asserts proprietary status, but a dedicated licence/transfer notice and complete release-specific component and delivery record still require review. Independent scientific, rights and recipient acceptance are not established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-117 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-01. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	19,500	21,785
Negotiation reference - low	16,000	17,875
Negotiation reference - high	24,500	27,371
Recreation cost estimate	65,500	73,177
Marketability cost scenario	25,332	28,301
Monetisation cost scenario	16,703	18,661
Risk-adjusted strategic reference	5,176	5,783
Weighted economic reference	26,594	29,711

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The stated implemented scope reconciles to explicit non-overlapping seller budgets; assumed effort is not actual expenditure or market value. Only additional committed strain-source, periodic zero-mode, imposed-boundary and force-law diagnostic software through R2g is priced. Previously budgeted classical lattice and matter-field work is retained once. R2h rotational-averaging candidate, physical gravity, observational evidence, hardware and future research are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
