Autonomous Adaptation Framework

Evaluate recovery options when a system degrades, and examine whether continuity can be preserved.

Product overview

An adaptation and continuity research framework with source-bound evidence qualification, a separate dual-attestation authorization protocol and canonical typed evidence contracts.

Potential acquirers

- Reliability software vendors
- Systems research teams
- Platform engineering groups

Documented functions

- Study bounded degradation and continuity recovery
- Bind target-specific evidence and qualification lineage
- Require distinct Guardian and Operator attestations
- Use explicit signature-verifier and replay-guard contracts
- Encode canonical evidence and retain immutable legacy bindings

Available output types

Recovery plans / Continuity studies / Qualification records

AI & decision software

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 362,000	**Developed software**

Current scope and conditions

Existing software offered for evaluation against an agreed use and delivery scope.

Available for acquisition discussion

Identified edition: 0.25.0

• The v0.24 qualification is source- and target-specific. General power-loss durability, independent third-party reproduction, production key infrastructure and operational authorization are not established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-027 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-03. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	362,000	406,019
Negotiation reference - low	292,000	327,507
Negotiation reference - high	452,500	507,524
Recreation cost estimate	1,660,000	1,861,856
Marketability cost scenario	2,004,450	2,248,191
Monetisation cost scenario	1,904,850	2,136,480
Risk-adjusted strategic reference	2,022,362	2,268,281
Weighted economic reference	1,904,687	2,136,297

Milestone-conditioned reference

Not established. No independently supported higher maturity amount or new attributable market/income evidence is established.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

Recreation estimate: EUR 1,650,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 1,660,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Partial scoped budget; retained anchor remains provisional. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
