Cosmological Structure and Expansion Research Platform

Validate declared catalogue structure, map sky coordinates under explicit geometry assumptions and compare synthetic weighted clustering estimates with independent numerical references.

Product overview

Computational cosmology software for bounded catalogue integrity, full-row FITS checks, fiducial sky geometry and weighted isotropic or anisotropic correlation references.

Potential acquirers

- Scientific-software and astronomical-analysis vendors
- Cosmology and survey-methodology research groups
- Research teams developing numerical-assurance workflows

Documented functions

- Validate complete declared FITS catalogue rows within resource limits
- Transform sky coordinates under a stated fiducial cosmology
- Apply matched sky-coordinate selection to data and random inputs
- Compute exact weighted isotropic and bounded anisotropic correlations
- Compare multipole and covariance outputs with numerical oracles

Available output types

Catalogue-integrity and full-row format reports / Fiducial geometry and weighted-correlation records / Anisotropic-bin, multipole and numerical-reference assessments

Scientific observation & life sciences

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 27,000	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: Python 0.1.0 / native 0.10.0 / S10 anisotropic reference

• The complete current native build, regression suite and anisotropic numerical oracle pass local CPU replay. Retained cross-environment evidence has its own earlier source scope; independent current-edition recipient acceptance remains separate.

• Tests use bounded synthetic fixtures. Real survey-data admission, survey selection and covariance, source-specific rights and published observational reconstruction remain open.

• Anisotropic estimates use the stated pre-reconstruction convention and bounded exact reference implementation. They do not establish full-survey scalability, a cosmological discovery or reproduction of a published survey statistic.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-114 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-11-03. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	27,000	30,283
Negotiation reference - low	22,000	24,675
Negotiation reference - high	34,000	38,134
Recreation cost estimate	90,500	101,505
Marketability cost scenario	35,001	39,257
Monetisation cost scenario	23,078	25,884
Risk-adjusted strategic reference	7,152	8,022
Weighted economic reference	36,744	41,212

Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained priced scope and successive non-overlapping budgets reconcile below. Equivalent effort and historical anchors are seller assumptions, not actual expenditure, independent quotations or market value. Previously priced correlation, covariance and sampled-FITS foundations are retained once. Only the added full-row scanner, fiducial geometry, selected sky pipeline and anisotropic reference software are included. Survey-data rights, accepted observations, physical discoveries, full-survey deployment and future research are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
