# Fundamental Reality Research Platform

Run FRRP numerical physics-reference and synthetic geometry experiments, compare consistency and verify the provenance and schema of research records.

## Product overview

Experimental research software for explicit cosmological reference calculations, toy-geometry experiments, numerical assurance and versioned provenance records.

## Potential acquirers

- Scientific-software vendors
- Computational physics and cosmology research groups
- Research-methods and numerical-assurance teams

## Documented functions

- Run declared cosmological reference calculations
- Explore synthetic graph-distance toy geometry
- Compare numerical integrators and analytic limits
- Record deterministic provenance and source limitations
- Validate versioned records and reject incompatible migrations

## Available output types

Numerical reference and synthetic experiment records / Convergence and consistency assessments / Schema-checked provenance and compatibility reports

Physics, mathematics & optimisation

# Defined work.
# Separate written terms.

| SELLER ASKING REFERENCE / AS IS | CURRENT OFFERED POSITION |
| --- | --- |
| **EUR 10,500** | **Research software** |

## Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.2.1 / R1.1 numerical and record assurance

• The v0.2.1 record-contract changes have local software acceptance. Prior v0.2.0 numerical second-runtime evidence does not by itself qualify the new schema code; full R1 acceptance and R2 remain open.

• Reference calculations, toy geometry and synthetic Bayesian comparisons are not new observations or proof of emergent spacetime, cosmic origins or an original fundamental-physics theory.

• Independent physical-science review, representative empirical data, declared platform compatibility and recipient acceptance require separate evidence and scope.

## Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

## Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

## Buyer information and next step

Quote TA-IP-112 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

https://thearchitect-max.github.io/MyProjects/projects/fundamental-reality-research-platform/

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

# Prices & sources.

Price basis: 2026-10-30. EUR is the reference currency; market value is not established.

| PRICE / MODEL REFERENCE | EUR | USD - indicative |
|---|---|---|
| Seller asking reference | 10,500 | 11,731 |
| Negotiation reference - low | 8,500 | 9,496 |
| Negotiation reference - high | 13,000 | 14,524 |
| Recreation cost estimate | 34,500 | 38,543 |
| Marketability cost scenario | 13,343 | 14,907 |
| Monetisation cost scenario | 8,798 | 9,829 |
| Risk-adjusted strategic reference | 2,726 | 3,045 |
| Weighted economic reference | 14,007 | 15,649 |

## Milestone-conditioned reference

Not established. No independently accepted next-stage scope or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

## Cost basis

The recreation estimate adopts the lowest expressly scoped seller effort scenario. It is not recorded expenditure, an absolute minimum, an independent quote or established market value. Only the specifically agreed first-party numerical-reference, synthetic experiment, assurance and record-contract software and documentation are priced. Other portfolio assets, empirical data rights, physical discoveries, a validated new theory, future R2 modules and production qualification are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.

## Source references

WIPO - Intellectual Property Valuation Basics — The cost method

Knab - Software developer freelance rates in 2026

Upwork - Software developer hiring costs

European Central Bank - Euro reference exchange rate - US dollar

External sources inform the method, contractor-rate context and currency only. Project-specific prices and model factors remain seller assumptions. The marketability, monetisation and strategic references share a cost anchor; their weighted blend is not an independent appraisal.

USD display: EUR 1 = USD 1.1172; ECB 2026-10-30. EUR is authoritative.
