Universal-Systems-Intelligence-Engine

Model connected systems, compare scenarios and examine bounded offline forecast studies with traceable evidence.

Product overview

Connected-system simulation, traceable observations and offline forecast studies with constrained-decision and release-assurance research gates. A retained real-data CPU benchmark covers one UCI building-energy dataset; scope, abstention, evidence provenance and comparison limits remain explicit.

Potential acquirers

- Digital-twin vendors
- Systems research groups
- Engineering consultancies

Documented functions

- Compose linked system studies
- Compare declared scenarios
- Review supplied observations
- Run local combined simulations
- Retain attributable histories
- Compare fixed-task offline forecasts with transparent CPU reference predictors
- Review chronological splits, held-out errors, empirical intervals and abstention
- Evaluate declared decision constraints with traceable feasibility and abstention
- Inspect static and executed research-release assurance
- Run pinned CPU data-receipt and benchmark studies

Available output types

Scenario comparisons / Observation records / Simulation histories / Bounded forecast-study and reference-comparison reports

Operations, reliability & digital twins

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 54,500	**Prototype**

Current scope and conditions

Distribution version 0.7.0 with later v0.9/v1.0 and Q1 research gates. All 219 current local developer tests passed. No independent scientific, security or production qualification is established.

Scope and transfer review required

Identified edition: 0.7.0 / v1.0 research gates + Q1

• The retained UCI building-energy benchmark is a developer evaluation of one dataset; raw-data results were not independently recalculated in this review.

• Persistence has the lowest reported MAE and AR(1) the lowest RMSE; no universal predictive superiority is demonstrated.

• Q2 multi-dataset predictive-superiority work is planned only. Physical fidelity, cross-domain accuracy and production acceptance remain open.

• The financial scope includes only the explicit implementation budgets, with earlier modelling and forecast foundations counted once.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-096 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-19. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	54,500	61,329
Negotiation reference - low	43,000	48,388
Negotiation reference - high	68,000	76,520
Recreation cost estimate	181,000	203,679
Marketability cost scenario	145,388	163,605
Monetisation cost scenario	103,849	116,861
Risk-adjusted strategic reference	72,088	81,121
Weighted economic reference	120,328	135,405

Milestone-conditioned reference

EUR 142,871; model change EUR 22,543. Reach the next portfolio maturity stage with source-pinned, reproducible release checks, bounded claims and an agreed operational and handover acceptance scope.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The recreation estimate contains EUR 167,500 of previously scoped work plus EUR 13,500 for post-0.7 constrained-decision, assurance and Q1 research implementation, giving EUR 181,000. This increment assumes 128 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. Asking/negotiation inputs preserve prior asking/cost relationships, rounded half-up to EUR 500. All effort and prices remain seller assumptions; market value and actual expenditure are not established. Existing v0.6 foundations and the already priced v0.7 forecast implementation are reused and excluded from this increment. Distribution metadata remains 0.7.0; v0.9/v1.0 are research gates. Q2 predictive-superiority work is planned only and excluded. Independent replication, scientific superiority, production deployment and third-party dataset ownership are excluded.

Full budget for the stated priced scope. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
