Adaptive Cognitive Runtime

Explore how adaptive learning and memory affect decisions in controlled research experiments.

Product overview

An experimental cognitive runtime for adaptation, memory and sequential decision studies, with an optional local neural backend and explicit worker-admission controls.

Potential acquirers

- AI research teams
- Cognition research groups
- Scientific software vendors

Documented functions

- Compare adaptation and sequential-task outcomes
- Study neural reconstruction and cross-modal alignment
- Replay and consolidate learned representations
- Retain portable neural state and research sessions
- Apply bounded opt-in capability-worker admission

Available output types

Learning-study records / Planning comparisons / Recovery evidence

Defined work. Separate written terms.

Seller asking reference / AS IS

EUR 227,500 · indicative USD 255,119

Identified edition: 0.4.6 / BICA 4.6

Developed software · Conditional handover

Current scope and conditions

Specifically agreed first-party implementation, documentation and retained evidence for 0.4.6 / BICA 4.6. Third-party software, datasets, models, content, service entitlements and future qualification remain subject to separate terms.

• No AGI capability is established. Worker processes are not a hostile-code kernel/container sandbox; execution requires explicit admission.

Conditions before handover

• Execute the complete repository and installed-package gates; qualify the optional CUDA backend on the buyer target and review trusted checkpoint handling.

• Dependency manifest exists without an identified lockfile; reproducibility should be reviewed.

• A detailed component inventory and licensing report are required for the agreed delivery scope.

• An explicit delivery manifest and handover scope remain to be agreed.

The seller offers only the expressly agreed first-party rights it owns or controls, to the extent transferable. Third-party materials retain their own terms. Independent title and freedom-to-operate opinions are not established.

Prices & sources.

Price basis: 2026-11-10. EUR is authoritative; market value is not established.

Price / model reference	EUR	USD - indicative
Seller asking reference	227,500	255,119
Negotiation reference - low	182,000	204,095
Negotiation reference - high	283,500	317,917
Recreation cost estimate	860,000	964,404
Marketability cost scenario	1,087,900	1,219,971
Monetisation cost scenario	986,850	1,106,654
Risk-adjusted strategic reference	1,097,622	1,230,873
Weighted economic reference	1,014,118	1,137,232

Cost basis

Recreation estimate: EUR 850,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 860,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.

Coverage describes stated seller estimates only. The retained earlier anchor lacks a complete work breakdown; added scope does not validate it.

Individual source review.

Reviewed 10 November 2026. Current main documentation, source inventory and open candidate status; no fresh execution of private product tests.

Retained source evidence

README reports 7/7 local focused CPU tests and CPU neural reconstruction smoke; full repository and CUDA GPU Colab archive required for v4.6 qualification.

Remaining limits

No v4.6 GPU PASS, AGI, broad autonomous cognition, real-world causal proof or hostile-code sandbox. Full pinned GPU qualification and operational security remain open.

Development position

No open pull request at the captured source snapshot.

Acquisition evidence profile

Technical scope: V — An experimental cognitive runtime for adaptation, memory and sequential decision studies, with an optional local neural backend and explicit worker-admission controls. The offered edition and material boundaries govern review.

Evidence and validation: E3 — Tests, validation and provenance/release evidence identified. Detailed source-specific records are reviewed under agreed confidentiality; independent intended-use acceptance remains separate.

Rights and component obligations: R2 — R1 plus dependency/third-party disclosure basis identified. Review the agreed first-party rights, third-party obligations and delivery perimeter.

Commercial basis: C2 — Seller ask and reproducible economic reference established. Market value is not established.

Delivery and handover: T3 — T2 plus validation, build/release and dependency-disclosure evidence. The listed conditions and written delivery agreement govern acceptance.

Buyer information and next step

Quote TA-IP-070 and the project title. Agree the exact first-party edition, rights, delivery manifest and recipient acceptance separately.
