Reality Substrate Hypothesis Testing Platform

Define bounded research hypotheses, compare source-bound synthetic models and review covariance-aware methodological evidence with explicit scientific limits.

Product overview

An independent research-software framework for declared hypothesis portfolios, source-bound synthetic model comparisons, covariance-aware methodological controls and bounded astronomical-data audits.

Potential acquirers

- Scientific research organisations
- Research-software vendors
- Computational-physics and methodology teams

Documented functions

- Run clearly labelled synthetic methodological experiments
- Declare bounded hypothesis portfolios and prediction provenance
- Review dimension-qualified synthetic model comparisons
- Compare fixed models using declared covariance assumptions
- Audit supported local astronomical files and replay evidence

Available output types

Synthetic experiment and model-comparison reports / Hypothesis and prediction records / Statistical-method and source-data audit summaries / Reproducibility packages

Physics, mathematics & optimisation

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 14,500	**Research software**

Current scope and conditions

Available as a specifically scoped research or development software asset. Independent application, rights and handover acceptance remain separate.

Available for acquisition discussion

Identified edition: 0.18.0

• A research-software framework, not a simulation detector or an empirically validated physical theory.

• Synthetic model comparisons and covariance controls do not establish new physics, a scientifically calibrated null, instrument calibration or an external simulator.

• The broader hypothesis families and cross-domain programme remain research directions; implemented bounded methodology is not a collection of validated physical model engines.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-110 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-30. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	14,500	16,199
Negotiation reference - low	12,000	13,406
Negotiation reference - high	18,500	20,668
Recreation cost estimate	49,500	55,301
Marketability cost scenario	19,144	21,388
Monetisation cost scenario	12,623	14,102
Risk-adjusted strategic reference	3,912	4,370
Weighted economic reference	20,098	22,453

Milestone-conditioned reference

Not established. No accepted next-maturity qualification or attributable market/income evidence supports a separate future amount.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

The retained expressly priced scope and successive non-overlapping implementation budgets reconcile below. Equivalent effort and historical anchors remain seller assumptions; actual expenditure, independent quotations and market value are not established. The previously priced synthetic experiments, astronomical-file audits, replay and hypothesis registry are reused once. Only the added bounded portfolio, dimension/source checks and covariance-aware synthetic comparison software is included. Empirical discoveries, physical theories, calibrated instrument response, third-party datasets and future model engines are excluded.

Stated scope reconciled to explicit budgets. Budget coverage concerns the stated priced scope; independent quotation and market value are not established.
