Adaptive Cognitive Runtime

Explore how adaptive learning and memory affect decisions in controlled research experiments.

Product overview

An experimental cognitive runtime for adaptation, memory and sequential decision studies, with an optional local neural backend and explicit worker-admission controls.

Potential acquirers

- AI research teams
- Cognition research groups
- Scientific software vendors

Documented functions

- Compare adaptation and sequential-task outcomes
- Study neural reconstruction and cross-modal alignment
- Replay and consolidate learned representations
- Retain portable neural state and research sessions
- Apply bounded opt-in capability-worker admission

Available output types

Learning-study records / Planning comparisons / Recovery evidence

AI & decision software

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 227,500	**Developed software**

Current scope and conditions

Existing software offered for evaluation against an agreed use and delivery scope.

Available for acquisition discussion

Identified edition: 0.4.6 / BICA 4.6

• No AGI capability is established. Worker processes are not a hostile-code kernel/container sandbox; execution requires explicit admission.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-070 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-18. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	227,500	256,006
Negotiation reference - low	182,000	204,805
Negotiation reference - high	283,500	319,023
Recreation cost estimate	860,000	967,758
Marketability cost scenario	1,087,900	1,224,214
Monetisation cost scenario	986,850	1,110,502
Risk-adjusted strategic reference	1,097,622	1,235,154
Weighted economic reference	1,014,118	1,141,187

Milestone-conditioned reference

Not established. No independently supported higher maturity amount or new attributable market/income evidence is established.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

Recreation estimate: EUR 850,000 retained scope component plus EUR 10,000 for the explicitly scoped implementation work budget, giving EUR 860,000. The scoped budget assumes 96 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.
