Advanced Ground Vehicle Engineering

Compare ground-vehicle concepts and assess design choices before committing to further engineering work.

Product overview

An offline C++ engineering-analysis foundation for ground-vehicle concept comparisons, cumulative scenario-sequence energy and deterministic multi-node thermal networks.

Potential acquirers

- Vehicle engineering teams
- Simulation vendors
- Engineering consultancies

Documented functions

- Compare mobility, source-energy and uncertainty assumptions
- Accumulate scenario duration, distance and energy
- Model thermal nodes, conductive links and fixed boundaries
- Inspect energy-balance residuals and stability guards
- Export deterministic text, JSON and residual records

Available output types

Concept comparisons / Reference-data reports / Engineering evidence

Aerospace & mobility engineering

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 56,000	**Prototype**

Current scope and conditions

A prototype offered for evaluation and continued development; production acceptance is separate.

Available for acquisition discussion

Identified edition: 0.8.0

• The scope is offline, nonoperational analysis. Field reliability, manufacturing feasibility, real subsystem performance and physical qualification are not established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-034 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-18. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	56,000	63,017
Negotiation reference - low	45,500	51,201
Negotiation reference - high	71,000	79,896
Recreation cost estimate	456,500	513,699
Marketability cost scenario	314,300	353,682
Monetisation cost scenario	261,917	294,735
Risk-adjusted strategic reference	155,841	175,368
Weighted economic reference	283,913	319,487

Milestone-conditioned reference

EUR 335,140; model change EUR 51,227. Reach the next portfolio maturity stage with source-pinned, reproducible release checks, bounded claims and agreed handover evidence.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

Recreation estimate: EUR 450,000 retained scope component plus EUR 6,500 for the explicitly scoped implementation work budget, giving EUR 456,500. The scoped budget assumes 64 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.
