Aerospace Mission Simulator

Explore mission scenarios, compare routes and examine planning assumptions before real-world deployment.

Product overview

A deterministic mission research simulator with route and fault studies, robust planning and a lumped battery model linking charge, resistive losses, temperature and available propulsion power.

Potential acquirers

- Aerospace research groups
- Mission-planning software vendors
- Vehicle engineering teams

Documented functions

- Simulate mission, route and fault scenarios
- Compare robust planning and energy margins
- Model charge-dependent voltage and resistive loss
- Propagate thermal and low-charge power derating
- Retain deterministic battery and supervisory histories

Available output types

Mission comparisons / Scenario telemetry / Safety-review records

Aerospace & mobility engineering

Defined work.
Separate written terms.

SELLER ASKING REFERENCE / AS IS	CURRENT OFFERED POSITION
EUR 216,500	**Developed software**

Current scope and conditions

Existing software offered for evaluation against an agreed use and delivery scope.

Available for acquisition discussion

Identified edition: 2.9.0

• This is research/software-in-the-loop scope. Battery qualification, real-aircraft performance, operational flight evidence and aircraft certification are not established.

Offered first-party perimeter

• The specifically agreed first-party software or research work product

• Associated first-party product documentation and retained evaluation material

• The expressly agreed transferable first-party rights

Separately scoped or excluded

Third-party software, data, media, models and service entitlements beyond their own terms

Personal, customer and author content, private accounts and credentials

Future development, hosting, hardware, support and operating businesses unless expressly agreed

Buyer information and next step

Quote TA-IP-030 and the project title when discussing your intended use through the verified seller contact channel supplied with this portfolio. Detailed diligence is handled through an agreed review process.

The asking reference is an indicative seller choice, not an independent market appraisal. Rights, exact delivery, acceptance, consideration and taxes require separate written terms. Viewing this document grants no software or IP rights. Buyer descriptions indicate potential fit, not existing customers or contracts.

Prices & sources.

Price basis: 2026-10-18. EUR is the reference currency; market value is not established.

PRICE / MODEL REFERENCE	EUR	USD - indicative
Seller asking reference	216,500	243,627
Negotiation reference - low	171,000	192,426
Negotiation reference - high	271,500	305,519
Recreation cost estimate	855,000	962,132
Marketability cost scenario	884,925	995,806
Monetisation cost scenario	981,113	1,104,046
Risk-adjusted strategic reference	892,833	1,004,705
Weighted economic reference	899,449	1,012,150

Milestone-conditioned reference

Not established. No independently supported higher maturity amount or new attributable market/income evidence is established.

This is a conditional maturity sensitivity, not a current asking price, forecast or established market value.

Cost basis

Recreation estimate: EUR 850,000 retained scope component plus EUR 5,000 for the explicitly scoped implementation work budget, giving EUR 855,000. The scoped budget assumes 48 equivalent hours at EUR 94/hour plus 15%, rounded down to EUR 500. The retained scope component has no complete per-role reconstruction budget and remains a low-confidence seller estimate. The asking reference and negotiation bounds preserve the seller-selected asking/cost relationships, rounded to EUR 500; they are transaction assumptions, not measured market value.
